Acknowledgments

The Little Data Book on Financial Development 2013 is a part of a broader data-collection effort related to the World Bank's *Global Financial Development Report 2013*. The *Little Data Book* was prepared under the supervision of Aslı Demirgüç-Kunt by a team led by Martin Čihák and comprising Subika Farazi, Mauricio Pinzon Latorre, Amin Mohseni-Cheraghlo, Benjamin Levine, and Vin Nie Ong. The team was assisted by Hedia Arbi. In compiling and updating the databases underlying the report, the team built on previous compilation efforts at the World Bank, including the work of Erik Feyen, Katie Kibuuka, Diego Sourrouille, Ed Al-Hussainy, Haocong Ren, and Andrea Coppola.

The work was carried out under the oversight of Janamitra Devan, Vice President (Finance and Private Sector Development and International Finance Corporation), Justin Yifu Lin, former Chief Economist and Senior Vice President (Development Economics), and Martin Ravallion, Acting Chief Economist and Senior Vice President (Development Economics). We thank Erik Feyen, Maria Soledad Martinez Peria, İnci Ötoker-Robe, Thorsten Beck, Augusto de la Torre, Stijn Claessens, Roberto Rocha, Tunc Uyanik, Ross Levine, Norman Loayza, Aart Kraay, Sergio Schmukler, Gerard Caprio, Patrick Honohan, Alain Ize, Maya Eden, and participants in a series of seminars organized at the World Bank.

Financial support from the State Secretariat for Economic Affairs (Switzerland) is gratefully acknowledged. The Knowledge for Change program and Research Support Budget provided funding for the related research program in the Development Economics Vice Presidency.

Production of this volume was managed by the Development Data Group under the direction of Shaida Badiée, with a team consisting of Azita Amjadi, Liu Cui, Shelley Fu, Mohammed Omar Hadi, Wendy Huang, Buyant Erdene Khaltarkhuu, Alison Kwong, Ibrahim Levent, and William Prince. The book's design was done by Jomo Tariku based on an original design by Communications Development Incorporated. Typesetting was done by Barton Matheson Willse & Worthington. Staff from External Affairs oversaw publication and distribution of the book.

The reference citation for the data provided in this book is: Martin Čihák, Aslı Demirgüç-Kunt, Erik Feyen, and Ross Levine, 2012 "Benchmarking Financial Systems Around the World." World Bank Policy Research Working Paper 6175, World Bank, Washington, D.C. (hereafter Čihák, Demirgüç-Kunt, Feyen and Levine, 2012)

Foreword

The Little Data Book on Financial Development 2013 is a pocket edition of the Global Financial Development Database published as part of the work on the *Global Financial Development Report 2013: Rethinking the Role of the State in Finance*.

The Global Financial Development Database is an extensive dataset of financial system characteristics for 203 economies. The database includes measures of (1) size of financial institutions and markets (financial depth), (2) degree to which individuals can and do use financial services (access), (3) efficiency of financial intermediaries and markets in intermediating resources and facilitating financial transactions (efficiency), and (4) stability of financial institutions and markets (stability). For a complete description of the dataset and a discussion of the underlying literature, see Čihák, Demirgüç-Kunt, Feyen and Levine, 2012.

There is ample evidence on the role financial sector development plays in economic development, poverty alleviation and economic stability. However there are serious shortcomings associated with measuring the concept of the “functioning of the financial system.” Recognizing the need for good data to better understand the concept of financial development, the World Bank’s Financial and Private Sector Vice Presidency and Development Economics Vice Presidency have recently launched a Global Financial Development Database, an extensive worldwide database that combines and updates several financial data sets.

The data highlight the multi-dimensional nature of financial systems. Deep financial systems do not necessarily provide high degrees of financial access; highly efficient financial systems are not necessarily more stable than the less efficient ones, and so on. Each of these characteristics has an association with aspects of the broader socio-economic development, and each is, in turn, strongly associated with financial sector policies and other parts of the enabling environment for finance. The data also demonstrate the effects of the global financial crisis. The crisis not only increased financial instability but also translated into difficulties along other dimensions, such as increasing problems of access to financial services.

A basic comparison of data confirms that while financial systems in developing economies tend to be less deep, provide less access, and are somewhat less efficient, their stability has been comparable to financial systems in developed countries in recent years. For instance, the average depth of financial institutions’ (measured as Private Credit to Gross Domestic Product (GDP)) and markets (measured as Stock Market Capitalization plus Outstanding Domestic Private Debt Securities to GDP) in developed economies is more than twice of that in developing economies. However in terms of stability of financial institutions (measured by the Z-score), on average, the banking systems in developing economies are less volatile than in developed economies. The level of stability of financial markets (measured as the asset price volatility) is similar, on average, for both developed and developing economies.

Data notes

The data in this book are for 2000, 2005, and 2010. Figures in italics indicate data for years other than those specified.

Symbols used:

- .. indicates that data are not available or that aggregates cannot be calculated because of missing data
- 0 or 0.0 indicates zero or small enough that the number would round to zero at the displayed number of decimal places
- \$ indicates current U.S. dollars

Data are shown for economies with population greater than 30,000 or for smaller economies if they are members of the World Bank. The term country (used interchangeably with *economy*) does not imply political independence or official recognition by the World Bank but refers to any economy for which the authorities report separate social or economic statistics.

Aggregate data for ratios, shares, and percentage rates are medians.

The selection of indicators in these pages includes some of those being part of the Global Financial Development Database (GFDD). For more information about the GFDD and the *Global Financial Development Report* please see Čihák, Demirgüç-Kunt, Feyen and Levine, 2012 and visit <http://worldbank.org/financialdevelopment>, <http://data.worldbank.org/data-catalog/global-financial-development>, and <http://databank.worldbank.org/>.

An important part of the financial inclusion data in GFDD comes from the Global Findex database (for more information please see Demirgüç-Kunt, Asli and Leora Klapper, 2012 “Measuring Financial Inclusion: The Global Findex Database.” World Bank Policy Research Working Paper 6025, World Bank, Washington, D.C., hereafter Demirgüç-Kunt and Klapper, 2012). Indicators with underlying data from Demirgüç-Kunt and Klapper (2012) are reported only for the year 2010 as the Global Findex database represents the first round of data collection done in 2011.

Indicators with underlying data from Bankscope—Bureau Van Dijk are constructed using bank-by-bank unconsolidated data. These indicators will be updated throughout the year to reflect Bankscope updates.

Regional tables

The country composition of regions is based on the World Bank's analytical regions and may differ from common geographic usage. The regions exclude high income economies.

East Asia and Pacific

Cambodia, China, Fiji, Indonesia, Kiribati, Korea, Dem. Rep., Lao People's Democratic Republic, Malaysia, Marshall Islands, Micronesia, Fed. Sts., Mongolia, Myanmar, Palau, Papua New Guinea, Philippines, Samoa, Solomon Islands, Thailand, Timor-Leste, Tuvalu, Tonga, Vanuatu, Vietnam

Europe and Central Asia

Albania, Armenia, Azerbaijan, Belarus, Bosnia and Herzegovina, Bulgaria, Georgia, Kazakhstan, Kosovo, Kyrgyz Republic, Latvia, Lithuania, Former Yugoslav Republic of Macedonia, Moldova, Montenegro, Romania, Russian Federation, Serbia, Tajikistan, Turkey, Turkmenistan, Ukraine, Uzbekistan

Latin America and the Caribbean

Antigua and Barbuda, Argentina, Belize, Bolivia, Brazil, Chile, Colombia, Costa Rica, Cuba, Dominica, Dominican Republic, Ecuador, El Salvador, Grenada, Guatemala, Guyana, Haiti, Honduras, Jamaica, Mexico, Nicaragua, Panama, Paraguay, Peru, St. Lucia, St. Vincent and the Grenadines, Suriname, Uruguay, República Bolivariana de Venezuela

Middle East and North Africa

Algeria, Djibouti, Arab Republic of Egypt, Islamic Republic of Iran, Iraq, Jordan, Lebanon, Libya, Morocco, Syrian Arab Republic, Tunisia, West Bank and Gaza, Republic of Yemen

South Asia

Afghanistan, Bangladesh, Bhutan, India, Maldives, Nepal, Pakistan, Sri Lanka

Sub-Saharan Africa

Angola, Benin, Botswana, Burkina Faso, Burundi, Cameroon, Cape Verde, Central African Republic, Chad, Comoros, Democratic Republic of the Congo, Republic of Congo, Côte d'Ivoire, Eritrea, Ethiopia, Gabon, The Gambia, Ghana, Guinea, Guinea-Bissau, Kenya, Lesotho, Liberia, Madagascar, Malawi, Mali, Mauritania, Mauritius, Mozambique, Namibia, Niger, Nigeria, Rwanda, São Tomé and Príncipe, Senegal, Seychelles, Sierra Leone, Somalia, South Africa, Sudan, Swaziland, Tanzania, Togo, Uganda, Zambia, Zimbabwe

Income group tables

For operational and analytical purposes the World Bank's main criterion for classifying economies is gross national income (GNI) per capita. Each economy in *The Little Data Book on Financial Development* is classified as low income, middle income, or high income. Low- and middle-income economies are sometimes referred to as developing economies. The use of the term is convenient; it is not intended to imply that all economies in the group are experiencing similar development or that other economies have reached a preferred or final stage of development. Classification by income does not necessarily reflect development status. Note: Classifications are fixed during the World Bank's fiscal year (ending on June 30), thus countries remain in the categories in which they are classified irrespective of any revisions to their per capita income data.

Low-income economies are those with a GNI per capita of \$1,025 or less in 2011.

Middle-income economies are those with a GNI per capita of more than \$1,025 but less than \$12,476. Lower-middle-income and upper-middle-income economies are separated at a GNI per capita of \$4,035.

High-income economies are those with a GNI per capita of \$12,476 or more.

Euro area includes the member states of the Economic and Monetary Union of the European Union that have adopted the euro as their currency: Austria, Belgium, Cyprus, Estonia, Finland, France, Germany, Greece, Ireland, Italy, Luxembourg, Malta, Netherlands, Portugal, Slovak Republic, Slovenia, and Spain.

Country tables

Cyprus

GDP and GNI data refer to the area controlled by the government of Cyprus.

Czech Republic

Deposit money bank assets data after 2009 are claims on general government and claims on other sectors.

Denmark

Deposit money bank assets data after 2009 are claims on general government and claims on other sectors.

Fiji

Data on other financial institutions assets are not available; the sum of claims on central government, claims on local government, claims on non-financial public enterprise, claims on private sector, and real estate are used.

Hungary

Deposit money bank assets data after 2009 are claims on general government and claims on other sectors.

Ireland

Claims on official entities and claims on private sector are used for constructing the data on other financial institutions assets.

Korea

Data on other financial institutions assets are reported in SDR units.

Latvia

Deposit money bank assets data after 2009 are claims on general government and claims on other sectors.

Lithuania

Deposit money bank assets data after 2009 are claims on general government and claims on other sectors. Variable claims on other sectors are used to construct the 2009 data on private credit by deposit money banks.

Madagascar

Some data on central bank assets are negative. However, line 12A in the IFS should not be negative as the data on claims on central government are presented on a gross basis. The negative values should be reclassified as government deposits, as they reflect liabilities. Hence, the negative observations are reported as missing.

Country tables

Malaysia

Data on other financial institutions assets are reported in SDR units.

Malta

Data on central bank assets commence reporting in 2008 according to European standards.

Mauritania

Data on central bank assets are not available before 2006.

Morocco

GDP and GNI data include Former Spanish Sahara.

Netherlands

Data on other financial institutions assets are not available; the sum of claims on central government, claims on local government, claims on non-financial public enterprise, claims on private sector, and real estate are used.

New Zealand

Data on other financial institutions assets are reported in SDR units.

Norway

Data on other financial institutions assets are not available; the sum of claims on central government, claims on local government, claims on non-financial public enterprise, claims on private sector, and real estate are used.

Rwanda

Claims on official entities and claims on private sector are used for constructing the data on other financial institutions assets.

Singapore

Data on other financial institutions assets are reported in SDR units.

Slovak Republic

After the year 2009, demand deposit of other resident sector and other deposits are used to construct the data on bank deposits.

Sudan

GDP and GNI data include South Sudan.

Sweden

Deposit money bank assets data after 2009 are claims on general government and claims on other sectors. Data on other financial institutions assets

Country tables

are not available in 2009; the sum of claims on central government, claims on local government, claims on nonfinancial public enterprise, claims on private sector, and real estate are used.

Switzerland

Data on other financial institutions assets are reported in SDR units.

Tanzania

GDP and GNI data refer to mainland Tanzania only.

United Kingdom

Central bank assets are claims on central government.

Glossary

Adults borrowing from a formal financial institution are the percentage of adults who report borrowing any money from a bank, credit union, microfinance institution, or another financial institution such as a cooperative in the past 12 months. Based on a world-wide household survey. (Demirgüç-Kunt and Klapper, 2012)

Adults saving at a financial institution are the percentage of adults who report saving or setting aside any money using an account at a formal financial institution such as a bank, credit union, microfinance institution, or cooperative in the past 12 months. Based on a world-wide household survey. (Demirgüç-Kunt and Klapper, 2012)

Adults with an account at a formal financial institution are the percentage of adults with an account (self or together with someone else) at a bank, credit union, another financial institution (e.g., cooperative, microfinance institution), or the post office (if applicable) including adults who reported having a debit card. Based on a world-wide household survey. (Demirgüç-Kunt and Klapper, 2012)

Bank accounts refers to the number of depositors with commercial banks per 1,000 adults. Based on data from individual commercial banks. (International Monetary Fund)

Bank branches refers to the number of commercial bank branches per 100,000 adults. Based on data from individual commercial banks. (International Monetary Fund)

Bank capital to total assets is the ratio of bank capital and reserves to total assets. Capital and reserves include funds contributed by owners, retained earnings, general and special reserves, provisions, and valuation adjustments. Capital includes tier 1 capital (paid-up shares and common stock), which is a common feature in all countries' banking systems, and total regulatory capital, which includes several specified types of subordinated debt instruments that need not be repaid if the funds are required to maintain minimum capital levels (these comprise tier 2 and tier 3 capital). Total assets include all nonfinancial and financial assets. (International Monetary Fund)

Bank concentration is the ratio of assets of the three largest commercial banks to total commercial banking assets. Total assets include total earning assets, cash and due from banks, foreclosed real estate, fixed assets, goodwill, other intangibles, current tax assets, deferred tax assets, discontinued operations and other assets. (Cihák, Demirgüç-Kunt, Feyen and Levine 2012)

Bank credit to bank deposits refers to the financial resources provided to the private sector by domestic money banks as a share of total deposits. Domestic money banks comprise commercial banks and other financial institutions that accept transferable deposits, such as demand deposits. Total deposits include demand, time and saving deposits in deposit money banks. (International Monetary Fund)

Glossary

Bank deposits refers to the total value of demand, time and saving deposits at domestic deposit money banks. Deposit money banks comprise commercial banks and other financial institutions that accept transferable deposits, such as demand deposits. Data are shown as a percentage of GDP. (International Monetary Fund)

Bank non-performing loans to gross loans is the ratio of defaulting loans (payments of interest and principal past due by 90 days or more) to total gross loans (the total value of the loan portfolio). The loan amount recorded as nonperforming includes the gross value of the loan as recorded on the balance sheet, not just the amount that is overdue. (International Monetary Fund)

Bank private credit refers to financial resources provided to the private sector by domestic money banks. Domestic money banks comprise commercial banks and other financial institutions that accept transferable deposits, such as demand deposits. Data are shown as a percentage of GDP. (International Monetary Fund, and World Bank GDP estimates)

Bank Z-score captures the probability of default of a country's banking system, calculated as a weighted average of the z-scores of a country's individual banks (the weights are based on the individual banks' total assets). Z-score compares a bank's buffers (capitalization and returns) with the volatility of those returns. (Cihák, Demirgüç-Kunt, Feyen and Levine 2012)

Boone indicator measures the degree of competition based on profit-efficiency in the banking market. It is calculated as the elasticity of profits to marginal costs. An increase in the Boone indicator implies a deterioration of the competitive conduct of financial intermediaries. (Cihák, Demirgüç-Kunt, Feyen and Levine 2012)

Corporate bonds to total bonds and notes outstanding refers to the total amount of domestic corporate bonds and notes outstanding to the total amount of domestic bonds and notes outstanding, both corporate and non-corporate. (Bank for International Settlements)

Deposit money bank assets refers to total assets held by deposit money banks. Assets include claims on domestic real nonfinancial sector which includes central, state and local governments, nonfinancial public enterprises and private sector. Deposit money banks comprise commercial banks and other financial institutions that accept transferable deposits, such as demand deposits. Data are shown as a percentage of GDP. (International Monetary Fund, and World Bank GDP estimates)

Firms with line of credit refers to firms in the formal sector with a line of credit or a loan from a financial institution. Data are shown as a percentage of total firms in the formal sector. (World Bank)

Gross domestic product is the sum of gross value added by all resident producers in the economy plus any product taxes and minus any subsidies not included in the value of the products. It is calculated without making deductions for depreciation of fabricated assets or for depletion and degradation of natural resources. Data are for 2010. (World Bank, Organisation for Economic Co-operation and Development, and United Nations)

Gross national income is the sum of value added by all resident producers plus any product taxes (less subsidies) not included in the valuation of output plus net receipts of primary income (compensation of employees and property income) from abroad. Data are for 2010. (World Bank, Organisation for Economic Co-operation and Development, and United Nations)

H-statistic is a measure of the degree of competition in the banking market. It measures the elasticity of banks revenues relative to input prices. Under perfect competition, an increase in input prices raises both marginal costs and total revenues by the same amount, and hence the H-statistic equals 1. Under a monopoly, an increase in input prices results in a rise in marginal costs, a fall in output, and a decline in revenues, leading to an H-statistic less than or equal to 0. When H-statistic is between 0 and 1, the system operates under monopolistic competition. (Cihák, Demirgüç-Kunt, Feyen and Levine 2012)

Inflation reflects the annual percentage change in the cost to the average consumer of acquiring a basket of goods and services that may be fixed or changed at specified intervals, such as yearly. The Laspeyres formula is generally used. Data are for 2010. (International Monetary Fund)

Lending-deposit spread is the difference between the lending rate charged by banks on loans to the private sector and the deposit interest rate offered by commercial banks on three-month deposits. (International Monetary Fund)

Lerner index is a measure of market power in the banking market. It compares output pricing and marginal costs (that is, markup). An increase in the Lerner index indicates a deterioration of the competitive conduct of financial intermediaries. (Cihák, Demirgüç-Kunt, Feyen and Levine 2012)

Liquid assets to deposits and short term funding is the ratio of the value of liquid assets (easily converted to cash) to short-term funding plus total deposits. Liquid assets include cash and due from banks, trading securities and at fair value through income, loans and advances to banks, reverse repos and cash collaterals. Deposits and short term funding includes total customer deposits (current, savings and term) and short term borrowing (money market instruments, CDs and other deposits). (Cihák, Demirgüç-Kunt, Feyen and Levine 2012)

Market capitalization excluding the top 10 largest companies refers to the value of listed shares outside of the top ten largest companies to total value of all listed shares. (World Federation of Exchanges)

Glossary

Net interest margin refers to the accounting value of a bank's net interest revenue as a share of its average interest-bearing (total earning) assets. (Cihák, Demirgüç-Kunt, Feyen and Levine 2012)

Non-bank financial institutions' assets refers to total assets held by financial institutions that do not accept transferable deposits but that perform financial intermediation by accepting other types of deposits or by issuing securities or other liabilities that are close substitutes for deposits. It covers institutions such as saving and mortgage loan institutions, post-office savings institution, building and loan associations, finance companies that accept deposits or deposit substitutes, development banks, and offshore banking institutions. Assets include claims on domestic real nonfinancial sector which includes central, state and local government, nonfinancial public enterprises and the private sector. Data are shown as a percentage of GDP. (International Monetary Fund, and World Bank GDP estimates)

Non-interest income refers to the portion of a bank's income that has been generated by non-interest related activities. Non-interest related income includes net gains on trading and derivatives, net gains on other securities, net fees and commissions and other operating income. Data are shown as a percentage of bank's total income (net-interest income plus non-interest income). (Cihák, Demirgüç-Kunt, Feyen and Levine 2012)

Number of listed firms is the number of domestically incorporated companies listed on the country's stock exchanges at the end of the year per 10,000 people. Investment companies, mutual funds, or other collective investment vehicles are excluded. (Standard & Poor's, Global Stock Markets Factbook and supplemental S&P data)

Outstanding domestic private debt securities is the total amount of domestic private debt securities (amount outstanding) issued in domestic markets. It covers long-term bonds and notes, commercial paper and other short-term notes. Data are shown as a percentage of GDP. (Bank for International Settlements)

Outstanding domestic public debt securities is the total amount of domestic public debt securities (amount outstanding) issued in domestic markets. It covers long-term bonds and notes, treasury bills, commercial paper and other short-term notes. Data are shown as a percentage of GDP. (Bank for International Settlements)

Outstanding international debt securities is the total amount of international debt securities (amount outstanding), both public and private. It covers long-term bonds and notes and money market instruments placed on international markets. Data are shown as a percentage of GDP. (Bank for International Settlements)

Overhead costs to total assets refers to the operating expenses of a bank as a share of the value of all assets held. Total assets include total earning assets, cash and due from banks, foreclosed real estate, fixed assets, goodwill, other intangibles, current tax assets, deferred tax assets, discontinued operations and other assets. (Cihák, Demirgüç-Kunt, Feyen and Levine 2012)

Population is the midyear estimate of all residents regardless of legal status or citizenship, except for refugees not permanently settled in the country of asylum who are generally considered part of the population of their country of origin. Data are for 2010. (Eurostat, United Nations Population Division, and World Bank)

Regulatory capital to risk-weighted assets refers to the capital adequacy of deposit takers. It is a ratio of total regulatory capital to its held assets, weighted according to risk of those assets. (International Monetary Fund)

Return on assets refers to commercial banks' net income to yearly averaged total assets. (Cihák, Demirgüç-Kunt, Feyen and Levine 2012)

Return on equity refers to commercial banks' net income to yearly averaged equity. (Cihák, Demirgüç-Kunt, Feyen and Levine 2012)

Small firms with line of credit to total small firms is the percentage of small firms (less than 20 employees) in the formal sector with a line of credit or a loan from a financial institution. (World Bank)

Stock market capitalization refers to the total value of all listed shares in a stock market as a percentage of GDP. (Standard & Poor's, Global Stock Markets Factbook and supplemental S&P data)

Stock market total value traded refers to the total value of all traded shares in a stock market exchange as a percentage of GDP. (Standard & Poor's, Global Stock Markets Factbook and supplemental S&P data)

Stock market turnover ratio refers to the total value of shares traded during the period divided by the average market capitalization for the period. (Standard & Poor's, Global Stock Markets Factbook and supplemental S&P data)

Value traded of top 10 traded companies refers to the value of all traded shares of the top ten traded companies as a share of total value of all traded shares in a stock market exchange. (World Federation of Exchanges)

Volatility of stock price index is the 360-day standard deviation of the return on the national stock market index. (Bloomberg)
