## INTRODUCTION

*Doing Business* sheds light on how easy or difficult it is for a local entrepreneur to open and run a small to medium-size business when complying with relevant regulations. It measures and tracks changes in regulations affecting 10 areas in the life cycle of a business: starting a business, dealing with construction permits, getting electricity, registering property, getting credit, protecting investors, paying taxes, trading across borders, enforcing contracts and resolving insolvency.

In a series of annual reports *Doing Business* presents quantitative indicators on business regulations and the protection of property rights that can be compared across 183 economies, from Afghanistan to Zimbabwe, over time. The data set covers 46 economies in Sub-Saharan Africa, 32 in Latin America and the Caribbean, 24 in East Asia and the Pacific, 24 in Eastern Europe and Central Asia, 18 in the Middle East and North Africa and 8 in South Asia, as well as 31 OECD high-income economies. The indicators are used to analyze economic outcomes and identify what reforms have worked, where and why.

This economy profile presents the *Doing Business* indicators for Slovenia. To allow useful comparison, it also provides data for other selected economies (comparator economies) for each indicator. The data in this report are current as of June 1, 2011 (except for

the paying taxes indicators, which cover the period January–December 2010).

The *Doing Business* methodology has limitations. Other areas important to business—such as an economy's proximity to large markets, the quality of its infrastructure services (other than those related to trading across borders and getting electricity), the security of property from theft and looting, the transparency of government procurement, macroeconomic conditions or the underlying strength of institutions—are not directly studied by *Doing Business*. The indicators refer to a specific type of business, generally a local limited liability company operating in the largest business city. Because standard assumptions are used in the data collection, comparisons and benchmarks are valid across economies. The data not only highlight the extent of obstacles to doing business; they also help identify the source of those obstacles, supporting policy makers in designing regulatory reform.

More information is available in the full report. *Doing Business 2012* presents the indicators, analyzes their relationship with economic outcomes and recommends regulatory reforms. The data, along with information on ordering *Doing Business 2012*, are available on the *Doing Business* website at <http://www.doingbusiness.org>.

## THE BUSINESS ENVIRONMENT

For policy makers trying to improve their economy's regulatory environment for business, a good place to start is to find out how it compares with the regulatory environment in other economies. *Doing Business* provides an aggregate ranking on the ease of doing business based on indicator sets that measure and benchmark regulations applying to domestic small to medium-size businesses through their life cycle. Economies are ranked from 1 to 183 by the ease of doing business index. For each economy the index is calculated as the ranking on the simple average of its percentile rankings on each of the 10 topics included in the index in *Doing Business 2012*: starting a business, dealing with construction permits, getting electricity, registering property, getting credit, protecting investors, paying taxes, trading across borders, enforcing contracts and resolving insolvency. The ranking on each topic is the simple average of the percentile rankings on its component indicators (see the data notes for more details).<sup>1</sup>

The aggregate ranking on the ease of doing business benchmarks each economy's performance on the indicators against that of all other economies in the *Doing Business* sample (figure 1.1). While this ranking tells much about the business environment in an economy, it does not tell the whole story. The ranking on the ease of doing business, and the underlying indicators, do not measure all aspects of the business environment that matter to firms and investors or that affect the competitiveness of the economy. Still, a high ranking does mean that the government has created a regulatory environment conducive to operating a business.

### ECONOMY OVERVIEW

**Region:** OECD high income

**Income category:** High income

**Population:** 2,065,110

**GNI per capita (US\$):** 23,860.00

**DB2012 rank:** 37

**DB2011 rank:** 37

**Change in rank:** 0

*Note:* See the data notes for sources and definitions.

<sup>1</sup> Except for the ease of getting credit, for which the percentile rankings on its component indicators are weighted, the depth of credit information index at 37.5% and the strength of legal rights index at 62.5%.

## THE BUSINESS ENVIRONMENT

Figure 1.1 Where economies stand in the global ranking on the ease of doing business

Source: *Doing Business* database.

## THE BUSINESS ENVIRONMENT

For policy makers, knowing where their economy stands in the aggregate ranking on the ease of doing business is useful. Also useful is to know how it ranks compared with other economies and compared with

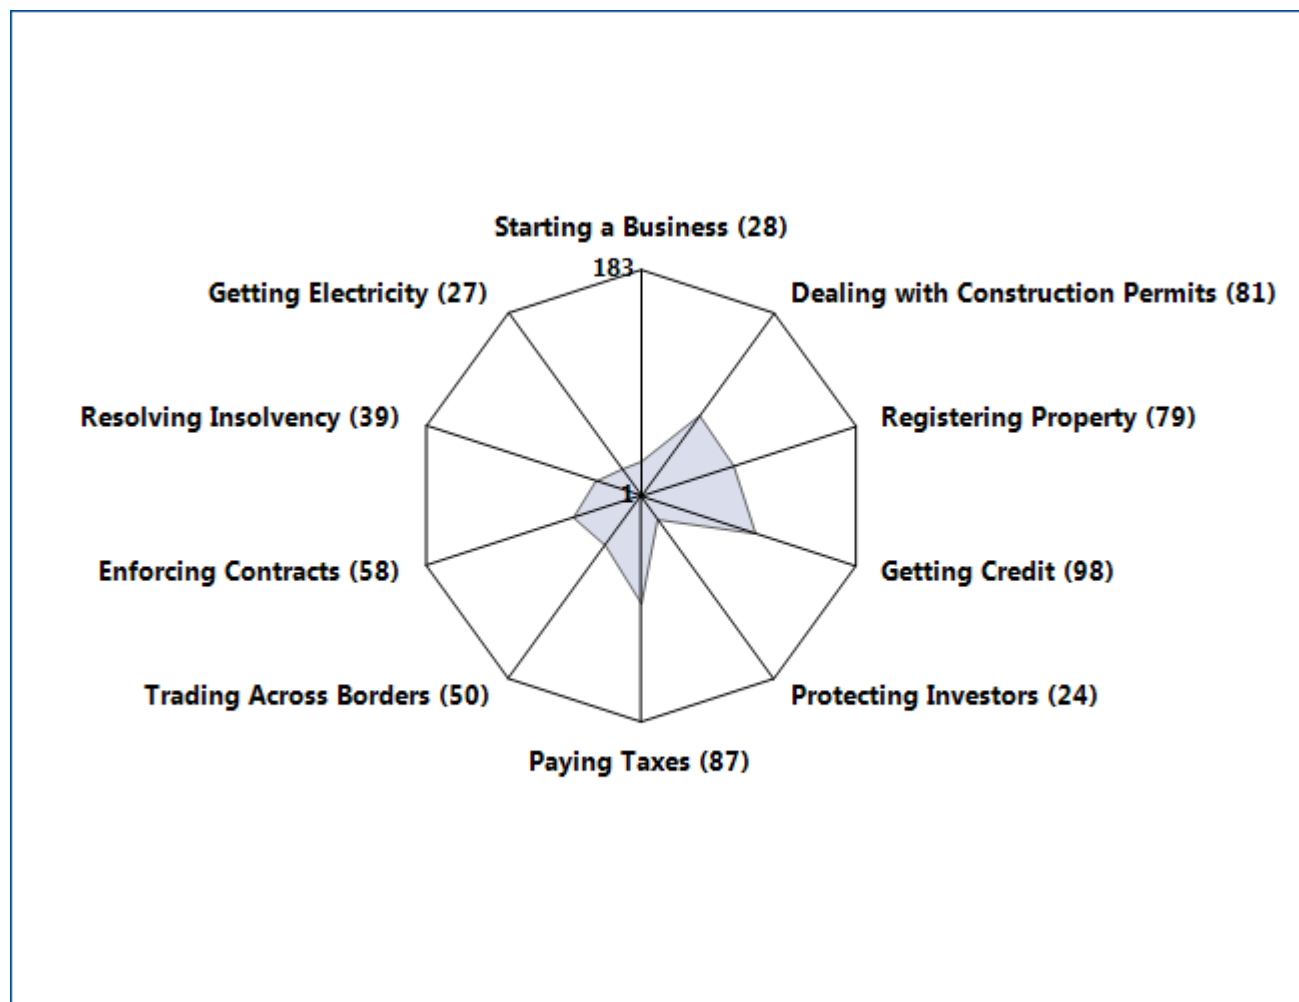

the regional average (figure 1.2). The economy's rankings on the topics included in the ease of doing business index provide another perspective (figure 1.3).

Figure 1.2 How Slovenia and comparator economies rank on the ease of doing business

## THE BUSINESS ENVIRONMENT

Figure 1.3 How Slovenia ranks on *Doing Business* topics

Source: *Doing Business* database.

## THE BUSINESS ENVIRONMENT

Just as the overall ranking on the ease of doing business tells only part of the story, so do changes in that ranking. Yearly movements in rankings can provide some indication of changes in an economy's regulatory environment for firms, but they are always relative. An economy's ranking might change because of developments in other economies. An economy that implemented business regulation reforms may fail to rise in the rankings (or may even drop) if it is passed by others whose business regulation reforms had a more significant impact as measured by *Doing Business*.

Moreover, year-to-year changes in the overall rankings do not reflect how the business regulatory environment in an economy has changed over time—or how it has changed in different areas. To aid in assessing such changes, *Doing Business 2012* introduces the distance to frontier measure.

This measure shows the distance of each economy to the “frontier,” a synthetic measure based on the most efficient practice or highest score observed for each *Doing Business* indicator across all economies and years included in the *Doing Business* sample since 2005. Nine areas of business regulation are covered.

Comparing the measure for an economy at 2 points in time allows users to assess how much the economy's regulatory environment as measured by *Doing Business* has changed over time—how far it has moved toward (or away from) the most efficient practices and strongest regulations in areas covered by *Doing Business* (figure 1.4). The results may show that the pace of change varies widely across the areas measured. They also may show that an economy is relatively close to the frontier in some areas and relatively far from it in others.

Figure 1.4 How far has Slovenia come in the areas measured by *Doing Business*?

Distance to frontier, 2005 and 2011

Note: For economies added to the *Doing Business* sample after 2005, the starting point is the year in which they were added: 2006 for Montenegro; 2007 for Brunei Darussalam, Liberia and Luxembourg; 2008 for The Bahamas, Bahrain and Qatar; and 2009 for Cyprus and Kosovo. See the data notes for more details on the distance to frontier measure.

## THE BUSINESS ENVIRONMENT

The absolute values of the indicators tell another part of the story (table 1.1). The indicators, on their own or in comparison with the indicators of a good practice economy or those of comparator economies in the region, may reveal bottlenecks reflected in large numbers of procedures, long delays or high costs. Or they may reveal unexpected strengths in an area of

business regulation—such as a regulatory process that can be completed with a small number of procedures in a few days and at a low cost. Comparison of the economy's indicators today with those in the previous year may show where substantial bottlenecks persist—and where they are diminishing.

Procedures (number)	32	32	39	27	35	41	36	32	Ireland (21)*
Resolving Insolvency (rank)	39	38	64	33	66	30	113	35	Japan (1)
Time (years)	2.0	2.0	2.0	3.2	2.0	1.8	2.7	4.0	Ireland (0.4)
Cost (% of estate)	4	4	10	17	15	22	23	18	Singapore (1)*
Recovery rate (cents on the dollar)	51.1	50.9	40.2	56.0	39.2	61.1	24.4	54.3	Japan (92.7)

Note: The methodology for the paying taxes indicators changed in *Doing Business 2012*; see the data notes for details. For these indicators, the best performer globally is the economy that has implemented the most efficient practices in its tax system and is not necessarily the one with the highest ranking. For more information on “no practice” marks, see the data notes for details.

\* Two or more economies share the top ranking on this indicator. A number shown in place of an economy’s name indicates the number of economies that share the top ranking on the indicator. For a list of these economies, see the *Doing Business* website (<http://www.doingbusiness.org>).

Source: *Doing Business* database.

## STARTING A BUSINESS

Formal registration of companies has many immediate benefits for the companies and for business owners and employees. Legal entities can outlive their founders. Resources are pooled as several shareholders join forces to start a company. Formally registered companies have access to services and institutions from courts to banks as well as to new markets. And their employees can benefit from protections provided by the law. An additional benefit comes with limited liability companies. These limit the financial liability of company owners to their investments, so personal assets of the owners are not put at risk. Where governments make registration easy, more entrepreneurs start businesses in the formal sector, creating more good jobs and generating more revenue for the government.

### What do the indicators cover?

*Doing Business* measures the ease of starting a business in an economy by recording all procedures that are officially required or commonly done in practice by an entrepreneur to start up and formally operate an industrial or commercial business—as well as the time and cost required to complete these procedures. It also records the paid-in minimum capital that companies must deposit before registration (or within 3 months). The ranking on the ease of starting a business is the simple average of the percentile rankings on the 4 component indicators: procedures, time, cost and paid-in minimum capital requirement.

To make the data comparable across economies, *Doing Business* uses several assumptions about the business and the procedures. It assumes that all information is readily available to the entrepreneur and that there has been no prior contact with officials. It also assumes that all government and nongovernment entities involved in the process function without corruption. And it assumes that the business:

- Is a limited liability company, located in the largest business city.
- Conducts general commercial or industrial activities.

### WHAT THE STARTING A BUSINESS INDICATORS MEASURE

#### Procedures to legally start and operate a company (number)

- Preregistration (for example, name verification or reservation, notarization)
- Registration in the economy's largest business city
- Postregistration (for example, social security registration, company seal)

#### Time required to complete each procedure (calendar days)

- Does not include time spent gathering information
- Each procedure starts on a separate day
- Procedure completed once final document is received
- No prior contact with officials

#### Cost required to complete each procedure (% of income per capita)

- Official costs only, no bribes
- No professional fees unless services required by law

#### Paid-in minimum capital (% of income per capita)

- Deposited in a bank or with a notary before registration (or within 3 months)
- Has a start-up capital of 10 times income per capita.
- Has a turnover of at least 100 times income per capita.
- Does not qualify for any special benefits.
- Does not own real estate.
- Is 100% domestically owned.

## STARTING A BUSINESS

### Where does the economy stand today?

What does it take to start a business in Slovenia? According to data collected by *Doing Business*, starting a business there requires 2 procedures, takes 6 days,

costs 0.0% of income per capita and requires paid-in minimum capital of 43.6% of income per capita (figure 2.1).

Figure 2.1 What it takes to start a business in Slovenia

Paid-in minimum capital (% of income per capita): 43.6

Note: For details on the procedures reflected here, see the summary at the end of this chapter.

Source: *Doing Business* database.

## STARTING A BUSINESS

Globally, Slovenia stands at 28 in the ranking of 183 economies on the ease of starting a business (figure 2.2). The rankings for comparator economies and the

regional average ranking provide other useful information for assessing how easy it is for an entrepreneur in Slovenia to start a business.

Figure 2.2 How Slovenia and comparator economies rank on the ease of starting a business

Source: *Doing Business* database.

## STARTING A BUSINESS

### What are the changes over time?

While the most recent *Doing Business* data reflect how easy (or difficult) it is to start a business in Slovenia today, data over time show which aspects of the

process have changed—and which have not (table 2.1). That can help identify where the potential for improvement is greatest.

Table 2.1 The ease of starting a business in Slovenia over time  
By *Doing Business* report year

Indicator	DB2004	DB2005	DB2006	DB2007	DB2008	DB2009	DB2010	DB2011	DB2012
Rank	..	..	..	..	..	..	..	28	28
Procedures (number)	9	9	9	9	9	5	3	2	2
Time (days)	60	60	60	60	60	19	6	6	6
Cost (% of income per capita)	14.8	13.5	12.0	9.4	8.5	0.1	0.0	0.0	0.0
Paid-in Min. Capital (% of income per capita)	19.9	19.0	17.0	54.0	49.8	46.8	43.3	45.0	43.6

Note: n.a. = not applicable (the economy was not included in *Doing Business* for that year). DB2012 rankings reflect changes to the methodology.

Source: *Doing Business* database.

## STARTING A BUSINESS

Equally helpful may be the benchmarks provided by the economies that today have the best performance regionally or globally on the procedures, time, cost or paid-in minimum capital required to start a business (figure 2.3). These economies may provide a model for

Slovenia on ways to improve the ease of starting a business. And changes in regional averages can show where Slovenia is keeping up—and where it is falling behind.

Figure 2.3 Has starting a business become easier over time?

### Procedures (number)

### Time (days)

## STARTING A BUSINESS

## Cost (% of income per capita)

## Paid-in minimum capital (% of income per capita)

*Note:* The economy with the best performance regionally on each indicator, and the economy with the best performance globally, are included as benchmarks. In some cases 2 or more economies share the top regional or global ranking on an indicator. In the case of paid-in minimum capital, 82 economies globally and 7 economies in OECD high income have no paid-in minimum capital.

*Source:* Doing Business database.

## STARTING A BUSINESS

Economies around the world have taken steps making it easier to start a business—streamlining procedures by setting up a one-stop shop, making procedures simpler or faster by introducing technology and reducing or eliminating minimum capital requirements. Many have undertaken business registration reforms in stages—and they often are part of a larger regulatory reform program. Among the benefits have been

greater firm satisfaction and savings and more registered businesses, financial resources and job opportunities.

What business registration reforms has *Doing Business* recorded in Slovenia (table 2.2)?

**Table 2.2 How has Slovenia made starting a business easier—or not?**  
By *Doing Business* report year

DB Year	Reform
<b>DB2012</b>	No reform.
<b>DB2011</b>	Slovenia made starting a business easier through improvements to its one-stop shop that allowed more online services.
<b>DB2010</b>	Business start-up was eased by shortening the time for company registration, allowing for simultaneous tax registration during company registration, and abolishing use of company seals.
<b>DB2009</b>	Business start-up was eased through single-access points that reduced the cost to establish limited liability companies and simplified administrative procedures. The number of procedures and the time required to start a company fell.

*Note:* For information on reforms in earlier years (back to DB2005), see the *Doing Business* reports for these years, available at <http://www.doingbusiness.org>.

*Source:* *Doing Business* database.

## STARTING A BUSINESS

### What are the details?

Underlying the indicators shown in this chapter for Slovenia is a set of specific procedures—the bureaucratic and legal steps that an entrepreneur must complete to incorporate and register a new firm. These are identified by *Doing Business* through collaboration with relevant local professionals and the study of laws, regulations and publicly available information on business entry in that economy. Following is a detailed summary of those procedures, along with the associated time and cost. These procedures are those that apply to a company matching the standard assumptions (the “standardized company”) used by *Doing Business* in collecting the data (see the section in this chapter on what the indicators measure).

#### STANDARDIZED COMPANY

**City:** Ljubljana

**Legal Form:** Družba z omejeno odgovornostjo (D.O.O.)

**Start-up capital:** 10 times GNI per capita

**Paid-in minimum capital (% of income per capita):** 43.6

#### Summary of procedures for starting a business in Slovenia—and the time and cost

No.	Procedure	Time to complete	Cost to complete
1	<p><b>Deposit capital in a bank account and get a receipt from the bank</b></p> <p>The minimum founding capital is EUR 7,500. The founding capital, or the base capital contribution can be paid in cash or as a non-cash contribution. Non-cash contribution include movables, real property, rights or any other non-cash assets. Before filing the application for entry, the partner must provide for at least one-quarter of the nominal capital, and the total value of all guaranteed contributions must amount to at least EUR 7,500.</p> <p>In order for an applicant to be able to file the application for registration at the e-VEM access point, they must demonstrate a certificate on the paid-in founding capital. The deposit account where the founding capital is deposited can be opened at a bank teller or electronically via the e-VEM web portal, which some banks already support and others are expected to join the system in the near future. The participating corporate banks allow e-VEM points to check for themselves whether the capital has been deposited to the bank account, and they can print out the certificate on the payment of the founding capital using the bank's information system data.</p>	1 day	no charge
2	<p><b>Register at the electronic One-stop shop: E-vem</b></p> <p>On 1 February 2008 single access points (VEM) began to operate for Limited Liability Companies. This reform is aimed at lowering of costs for establishment of LLC companies and at simplification of</p>	4-6 days	no charge

No.	Procedure	Time to complete	Cost to complete
	<p>administrative procedures. Founders may establish a LLC at the VEM point under two conditions: (1) all the contributions have to be paid in cash and prior to the registration of the company and (2) the articles of association have to be drafted in a special form (only mandatory and most common provisions can be incorporated in this form). In order to found a LLC, founders have to visit the VEM entry point in person, as the authorized person has to carry out their identification. VEM points will allow procedures to be dealt on line such as :</p> <ul style="list-style-type: none"> <li>-Limited Liability companies can go directly to the VEM, the deed is sent to point VEM or to the registration body through electronic channels, it must be signed by means of a safe electronic signature with qualified certificate (The qualified certificate is the special digital certificate for identity check and electronic operation at the VEM point services)</li> <li>-Standarts Articles of Association : help the founders to draft the articles of association, verify their signatures where necessary and draft the corresponding preposition for registration of the company at the court register. However it is still the common practise to have the statutes and the articles of associations prepared and certified by the notary.</li> <li>-Publication : Even if this requirement is not mandatory anymore, E-VEM allows for the company information to be available online. This information is so automatically published, which helped to shorten the time for starting a business in Slovenia.</li> <li>-Register with the Statistical Office of Slovenia : the court register automatically forwards all the required information to AJPES. The information is then entered in the Business Register and published online. Court register and business register are technically united in one information base and are now both run by AJPES.</li> <li>- Register with the tax administration- the tax information is trasmitted through E-VEM and data is entered automatically when it is received from E-VEM.</li> <li>- Register with the Health Institute.</li> </ul>		

\* Takes place simultaneously with another procedure.

## DEALING WITH CONSTRUCTION PERMITS

Regulation of construction is critical to protect the public. But it needs to be efficient, to avoid excessive constraints on a sector that plays an important part in every economy. Where complying with building regulations is excessively costly in time and money, many builders opt out. They may pay bribes to pass inspections or simply build illegally, leading to hazardous construction that puts public safety at risk. Where compliance is simple, straightforward and inexpensive, everyone is better off.

### What do the indicators cover?

*Doing Business* records the procedures, time and cost for a business to obtain all the necessary approvals to build a simple commercial warehouse in the economy's largest business city, connect it to basic utilities and register the property so that it can be used as collateral or transferred to another entity.

The ranking on the ease of dealing with construction permits is the simple average of the percentile rankings on its component indicators: procedures, time and cost.

To make the data comparable across economies, *Doing Business* uses several assumptions about the business and the warehouse, including the utility connections.

The business:

- Is a limited liability company operating in the construction business and located in the largest business city.
- Is domestically owned and operated.
- Has 60 builders and other employees.

The warehouse:

- Is a new construction (there was no previous construction on the land).
- Has complete architectural and technical plans prepared by a licensed architect.

### WHAT THE DEALING WITH CONSTRUCTION PERMITS INDICATORS MEASURE

#### Procedures to legally build a warehouse (number)

Submitting all relevant documents and obtaining all necessary clearances, licenses, permits and certificates

Completing all required notifications and receiving all necessary inspections

Obtaining utility connections for water, sewerage and a fixed telephone line

Registering the warehouse after its completion (if required for use as collateral or for transfer of the warehouse)

#### Time required to complete each procedure (calendar days)

Does not include time spent gathering information

Each procedure starts on a separate day

Procedure completed once final document is received

No prior contact with officials

#### Cost required to complete each procedure (% of income per capita)

Official costs only, no bribes

- Will be connected to water, sewerage (sewage system, septic tank or their equivalent) and a fixed telephone line. The connection to each utility network will be 10 meters (32 feet, 10 inches) long.
- Will be used for general storage, such as of books or stationery (not for goods requiring special conditions).
- Will take 30 weeks to construct (excluding all delays due to administrative and regulatory requirements).

## DEALING WITH CONSTRUCTION PERMITS

### Where does the economy stand today?

What does it take to comply with the formalities to build a warehouse in Slovenia? According to data collected by *Doing Business*, dealing with construction

permits there requires 13 procedures, takes 199 days and costs 64.9% of income per capita (figure 3.1).

Figure 3.1 What it takes to comply with formalities to build a warehouse in Slovenia

Note: For details on the procedures reflected here, see the summary at the end of this chapter.

Source: *Doing Business* database.

## DEALING WITH CONSTRUCTION PERMITS

Globally, Slovenia stands at 81 in the ranking of 183 economies on the ease of dealing with construction permits (figure 3.2). The rankings for comparator economies and the regional average ranking provide

other useful information for assessing how easy it is for an entrepreneur in Slovenia to legally build a warehouse.

Figure 3.2 How Slovenia and comparator economies rank on the ease of dealing with construction permits

Source: Doing Business database.

## DEALING WITH CONSTRUCTION PERMITS

### What are the changes over time?

While the most recent *Doing Business* data reflect how easy (or difficult) it is to deal with construction permits in Slovenia today, data over time show which aspects

of the process have changed—and which have not (table 3.1). That can help identify where the potential for improvement is greatest.

Table 3.1 The ease of dealing with construction permits in Slovenia over time  
By *Doing Business* report year

Indicator	DB2006	DB2007	DB2008	DB2009	DB2010	DB2011	DB2012
Rank	..	..	..	..	..	74	81
Procedures (number)	14	14	14	14	13	13	13
Time (days)	214	214	214	214	213	199	199
Cost (% of income per capita)	0.6	0.6	93.2	92.3	62.2	66.3	64.9

Note: n.a. = not applicable (the economy was not included in *Doing Business* for that year). DB2012 rankings reflect changes to the methodology. For more information on “no practice” marks, see the data notes for details.

Source: *Doing Business* database.

## DEALING WITH CONSTRUCTION PERMITS

Equally helpful may be the benchmarks provided by the economies that today have the best performance regionally or globally on the procedures, time or cost required to deal with construction permits (figure 3.3). These economies may provide a model for Slovenia on

ways to improve the ease of dealing with construction permits. And changes in regional averages can show where Slovenia is keeping up—and where it is falling behind.

Figure 3.3 Has dealing with construction permits become easier over time?

### Procedures (number)

### Time (days)

## DEALING WITH CONSTRUCTION PERMITS

## Cost (% of income per capita)

*Note:* The economy with the best performance regionally on each indicator, and the economy with the best performance globally, are included as benchmarks. In some cases 2 or more economies share the top regional or global ranking on an indicator. In cases where no data are displayed above for the economy, this indicates that the economy has received a “no practice” mark; see the data notes for details.

*Source:* Doing Business database.

## DEALING WITH CONSTRUCTION PERMITS

Smart regulation ensures that standards are met while making compliance easy and accessible to all. Coherent and transparent rules, efficient processes and adequate allocation of resources are especially important in sectors where safety is at stake. Construction is one of them. In an effort to ensure

building safety while keeping compliance costs reasonable, governments around the world have worked on consolidating permitting requirements. What construction permitting reforms has *Doing Business* recorded in Slovenia (table 3.2)?

Table 3.2 How has Slovenia made dealing with construction permits easier—or not?  
By *Doing Business* report year

DB Year	Reform
<b>DB2012</b>	No reform.
<b>DB2011</b>	No reform.
<b>DB2010</b>	Processes for dealing with construction permits were streamlined, such as lowering costs and no longer requiring a cadastre plan.
<b>DB2009</b>	No reform.

*Note:* For information on reforms in earlier years (back to DB2006), see the *Doing Business* reports for these years, available at <http://www.doingbusiness.org>.

*Source:* *Doing Business* database.

## DEALING WITH CONSTRUCTION PERMITS

### What are the details?

The indicators reported here for Slovenia are based on a set of specific procedures—the steps that a company must complete to legally build a warehouse—identified by *Doing Business* through information collected from experts in construction licensing, including architects, construction lawyers, construction firms, utility service providers and public officials who deal with building regulations. These procedures are those that apply to a company and structure matching the standard assumptions used by *Doing Business* in collecting the data (see the section in this chapter on what the indicators cover).

#### BUILDING A WAREHOUSE

**City :** Ljubljana

**Estimated Warehouse Value :** EUR 2,000,000

The procedures, along with the associated time and cost, are summarized below.

Summary of procedures for dealing with construction permits in Slovenia —and the time and cost

No.	Procedure	Time to complete	Cost to complete
1	<p><b>Obtain the location information</b></p> <p>Before preparation of the project documentation, either the investor or the project manager must acquire location information. The location information includes data on plot conditions, as determined by the municipal Spatial Acts (zoning laws), and data on the intended use of the area.</p> <p>A copy of the cadastral plan of the plot should be attached to the application for the location information.</p> <p>The cost for the procedure is a stamp duty of EUR 17.73 for the location information and EUR 1.42 per sheet of the cadastral plan.</p> <p>According to the Spatial Planning Act amended in 2008, the applicant is not obliged to obtain the location information any more. Also, according to the Construction Act amended in 2008, the location information is no longer a part of the project documentation for building permit. All data included in the location information must be obtained ex officio by the local administration that issues the building permit. However, in practice obtaining the location information is still done by most applicants to provide additional guarantee. Additionally, the location information provides a clear list of project approvals that must be obtained in the process of obtaining the building permit for the area in question. Location documents can be obtained online on <a href="http://www.gu.gov.si/en">http://www.gu.gov.si/en</a>. This lagged reform has allowed anybody to obtain land maps, geodetic data directly online.</p>	1 day	EUR 18
2	<p><b>Obtain project conditions from water and sewage provider</b></p> <p>Project conditions from the water and sewage provider - JP Vodovod-</p>	15 days	no charge

No.	Procedure	Time to complete	Cost to complete
	<p>Kanalizacija d.o.o. must be obtained before the project design is completed in order to define all special requirements which should be taken into consideration while preparing the project design with respect to the connecting of the building to the water and sewage network.</p> <p>According to the last amendment to the Construction Act which came into force on 15 April 2008, all agencies authorized for issuing the project conditions and approvals to the project solutions (i.e. water provider, electricity provider etc.) must issue the aforementioned conditions and approvals to the investor or to the project manager free of charge. The project conditions must be issued in 30 days (15 days in case of simple constructions) from the day of submitting the application. In case the project conditions are not issued within the aforementioned deadline, it is deemed that the agency does not impose any conditions to the project design. It is deemed that the authority gives its approval to the project approval stage. That means that the investor may start soliciting the building permit without attaching the project approval to the application (the investor must only attach the confirmation of receipt of the application for the project conditions as a proof that the application was filed to the agency). Nevertheless, the agency can still impose its conditions later when the building permit is being obtained and in that case the investor must apply for the project approval.</p> <p>Further under the new Construction Act, the investor is not obliged to obtain the project conditions in case that the construction area in question is covered by the spatial planning act. In that case authorized agencies already gave their opinions regarding the spatial arrangement of the area already in the process of adopting the spatial planning act. In that case the investor is obliged to obtain only the authorized agency's approval to the project approval. A draft of the project design is an obligatory attachment to the application for the project conditions.</p>		
3	<p><b>* Obtain project conditions from electricity company</b></p> <p>The project conditions must be obtained from Elektro Ljubljana d.d. before the project design is completed in order to define all special requirements that should be taken into consideration while preparing the project design with respect to the electrification of the building. No formal feasibility study is required. Applicants for electricity service must obtain general approval of the location documentation. This approval is issued after an on-site examination has been completed and the layout of the future electrical connection determined, provided that no hindrances emerge.</p> <p>According to the last amendment to the Construction Act which came into force on 15 April 2008, all agencies authorized for issuing the project conditions and approvals to the project solutions (i.e. water provider, electricity provider etc.) must issue the aforementioned conditions and approvals to the investor or to the project manager free</p>	15 days	no charge

No.	Procedure	Time to complete	Cost to complete
	<p>of charge. The project conditions must be issued in 30 days (15 days in case of simple constructions) from the day of submitting the application. In case the project conditions are not issued within the aforementioned deadline, it is deemed that the agency does not impose any conditions to the project design. It is deemed that the authority gives its approval to the project approval stage. That means that the investor may start soliciting the building permit without attaching the project approval to the application (the investor must only attach the confirmation of receipt of the application for the project conditions as a proof that the application was filed to the agency). Nevertheless, the agency can still impose its conditions later when the building permit is being obtained and in that case the investor must apply for the project approval.</p> <p>Further under the new Construction Act, the investor is not obliged to obtain the project conditions in case that the construction area in question is covered by the spatial planning act. In that case authorized agencies already gave their opinions regarding the spatial arrangement of the area already in the process of adopting the spatial planning act. In that case the investor is obliged to obtain only the authorized agency's approval to the project design. A draft of the project design is an obligatory attachment to the application for the project conditions.</p>		
4	<p><b>Obtain project approval from electricity company</b></p> <p>After the project design has been prepared, approval by the same agencies which previously imposed conditions on the project design must be obtained, confirming that the project design is completed in accordance with the requirements stated in the project conditions. Approval from the electricity company is necessary to obtain the building permit and to connect the premises to the electricity network.</p> <p>As already stated (Procedure 4), the authorized agencies' approvals to the project solutions are according to the last amendment to the Construction Act free of charge. The authorized agency must issue the approval (or disapproval) to the project solutions in 30 days from the moment the application was submitted. If the agency's approval (disapproval) is not issued within the 30 days, it is deemed that the agency has given its approval (i.e. the investor may start with the building permit obtaining procedure without attaching the project approval to the application).</p> <p>The obligatory attachment to the application for the project approval is a part of project design which applies to the electrification of the building. The agency may require additional attachments (such as proof of ownership of the land etc.).</p> <p>Once the approval to project solutions is obtained, the next step to be taken regarding the electrification of the building is obtaining the approval for connecting to the network. Connection approval must be issued in 30 days from the day of submitting the application, however the practice is that the connection approval is usually issued in 14 days. The connection approval must be issued free of any charge. The</p>	30 days	no charge

No.	Procedure	Time to complete	Cost to complete
	<p>application for connection approval may be submitted before the building permit is obtained. In that case the investor must obtain the building permit and submit it to the utility in two years from the date the approval to connect to the network was issued. In that case the validity of the connection approval is automatically pro-longed for the next two years. Within that time the investor must fulfill all technical requirements (in order to connect to the electricity network) stated in the issued connection approval. In the case the investor fails to obtain the building permit or to fulfill all technical requirements from the approval in the mentioned deadlines, the issued connection approval is not valid any more (unless the validity of the connection approval is pro-longed by the utility).</p> <p>Once the approval for connecting to the network is obtained, a connection contract may be concluded with the utility (time needed is 1 day). The connection contract defines all rights and obligations of the parties with respect to the payment for connection, its setting up, maintenance of the grid connection and other rights and obligations of the parties. The connection fee depends on the main power fuses needed (connection fee for 132 kW amounts to 11.312 EUR and for 148 kW 12.683 EUR (VAT included)). Once the connection fee is paid, the process of connecting to the electricity network may start .</p>		
5	<p><b>* Obtain project approval from water and sewage provider</b></p> <p>After the project design is completed, approval from the same agencies which imposed conditions on the project design must be obtained, confirming that the project design is completed in accordance with the requirements stated in the project conditions.</p> <p>As already stated in (Procedure 2), the authorized agency's approval to the project solution is according to the last amendment to the Construction Act free of any charge. The authorized agency must issue its approval (or disapproval) to the project solutions in 30 days from submitting the application. If the agency's s approval (disapproval) is not issued within the 30 days, it is deemed that the agency has given its approval (i.e. the investor may start with the building permit obtaining procedure without attaching the project approval to the application).</p> <p>The obligatory attachment to the application for approval to the project solutions is a part of the project design which applies to connecting of the building to the water and sewage network.</p> <p>This procedure can take place simultaneously with previous procedure.</p>	30 days	no charge
6	<p><b>Apply for and obtain a building permit from the Administration Unit Ljubljana</b></p> <p>According to the amended Construction Act, the obligatory attachments to the application for the building permit are the project design (at least two copies) and the certificate of the right to build (i.e. excerpt for the land registry as a proof of ownership of the land). The project design must be prepared by the licensed architect. The project design includes data on location of the building, schemes, architectural</p>	60 days	EUR 782

No.	Procedure	Time to complete	Cost to complete
	<p>plan, plan of building structures, plan on electrical installations, etc. The obligatory attachment to the application is a copy of all previously obtained approvals to the project solutions (please see Procedure 5 and 6).</p> <p>The administrative unit issues the building permit if the following conditions are fulfilled:</p> <ul style="list-style-type: none"> <li>- project design is completed in accordance with the applicable spatial plans</li> <li>- project design is prepared by a licensed architect</li> <li>- all required approvals have been obtained</li> <li>- project design is prepared in accordance with the valid legislation</li> <li>- contributions prescribed by law have been paid (i.e. administrative tax for the application for the building permit, public utilities charge, compensation for degradation of the environment)</li> <li>- building will be furnished with the minimal standard of the utility services (i.e. electricity, water and sewage etc.).</li> </ul> <p>The building permit is no longer valid if the investor fails to commence construction of the building in three years (two years in the case of the less complex constructions) from the date the building permit became final.</p> <p>According to the law, the administrative unit shall issue a building permit in 2 months (60 days) from the day the application (including all obligatory attachments) was submitted. This can take longer in practice but official statistics show that the legal time limit of 60 days is a safe time estimate.</p> <p>The cost depends on the value of the construction. The cost for building permit for a construction worth EUR 2 million, as it is in BuildCo's case, is EUR 730.00. The method for calculating the cost for issuing the building permit is the same, only the limit has changed from EUR 417,292.61 to 420,000.00 EUR. For example, if the construction value is EUR 420,000.00, the administrative tax is EUR 3.88 for the application itself and EUR 567,20 for the building permit. If the value of the construction is higher than EUR 420,000.00, the administrative tax is EUR 3.88 for the application itself and 0,01 % of the construction value for the building permit (0,01 % of the value of the construction applies only to the value of the construction exceeding EUR 420,00.00, in addition EUR 619.72 that applies to the value of the construction up to EUR 420,000.00). The costs for the building permit for a construction worth EUR 2 million would therefore be:</p> <ul style="list-style-type: none"> <li>- Administrative tax for the application: EUR 3.55</li> <li>- Administrative tax for the building permit: EUR 777,72.</li> </ul> <p>Note <math>(EUR\ 2,000,000.00 - EUR\ 420,000.00) \times 0,01\% + EUR\ 619.72 = EUR\ 158 + EUR\ 619.72 = EUR\ 777,72</math></p>		
7	<p><b>* Hire a geodesist company to conduct marking out before construction and after construction</b></p> <p>BuildCo would be using the services of a licensed geodesist company</p>	1 day	EUR 960

No.	Procedure	Time to complete	Cost to complete
	<p>or specialist before the construction and after the new building is completed. Before construction, BuildCo must ensure that the construction is marked out according to the building permit. A written notice stating the date and the place of marking out shall be sent to the municipal administration at least 8 days before commencement of the works. The associated cost depends on the size of the construction and on the number of corners (for example, for the building with 4 corners the price is between 370 and 700 EUR). This procedure is a prerequisite for the Technical Examination by the Administration Unit Ljubljana.</p> <p>After construction, the company needs to undertake a new study and prepare a geodetic plan of the new state of the plot. The associated cost depends on the size of the construction and on the number of corners (for example, for the building with 4 corners the price is between 370 and 700 EUR). This segment came as reform under the Construction Act (2008).</p>		
8	<p><b>File the report of the construction site with the Labor Inspection</b></p> <p>According to the regulations on labor safety at construction sites, BuildCo must prepare a report on the site and send it to the Labor Inspection at least 15 days before starting construction work.</p>	1 day	no charge
9	<p><b>Request license for use and receive technical examination by the Administration Unit Ljubljana</b></p> <p>The cost for technical examination depends on the value of the construction, namely 0,05 % from the construction value with the maximum fee of EUR 271.83. For the construction worth EUR 2 milion, the fee would be EUR 271.83.</p>	45 days	EUR 272
10	<p><b>* Obtain the license for use</b></p> <p>The application for a license to use must be filed in 8 days from the conclusion of construction works. The application shall state that the building was constructed in accordance with the building permit (the date and the number of the building permit must be also stated). The obligatory attachments to the application for license for use are:</p> <ul style="list-style-type: none"> <li>- project design of executed works (prepared by licensed architect)</li> <li>- geodetic plan of the new state of the plot with the completed construction (prepared by the authorized geodetic company, the costs vary between different geodetic companies (for the building with total surface of approximately 1,300.6 m<sup>2</sup>, the price is between 350 and 700 EUR)</li> <li>- certificate of reliability of the construction, signed by the responsible site manager, if appointed, and by the responsible project leader and the responsible supervisor</li> <li>- project plan regarding the maintenance and operation of the building, stating the minimal time limits for regular examinations and the scope of maintenance work</li> <li>- other documents, if required by special regulation.</li> </ul> <p>If the Administrative Unit establishes that the application has all</p>	12 days	EUR 19

No.	Procedure	Time to complete	Cost to complete
	<p>obligatory attachments, it names the commission for technical examination of the building and determines the date of the examination (Procedure 1).</p> <p>If the commission for technical examination establishes that the building was constructed in accordance with the issued building permit, the Administrative unit issues the license for use.</p> <p>The costs of the license for use are 3,88 EUR for the application and 15,49 EUR for the decision on issuance of the license for use, together 19,37 EUR. According to the law the administrative unit shall issue the license for use in 2 months (captured in previous and this procedure) from the day of submitting the application.</p>		
11	<p><b>Project for registration in official records</b></p> <p>According to the Real Estate Recording Act, the investor must file the application for registering the building into the Cadastre of buildings in 30 days from conclusion of all construction works or in 30 days from beginning of use of the building. In each case, the application shall be filed before the investor notifies its registered seat in the building (i.e. at the address of the building). If the application for registering the building is not filed in 30 days from beginning of use or conclusion of all construction works, the Surveying and Mapping Authority invites the investor to file the application in three months under the threat that a fine will be imposed upon him if the application is not filed as required by the Authority.</p> <p>Please note that the Construction Act defines the final deadline for registering the building into the Cadastre of buildings, which is 15 days after the decision on issuance of the license for use becomes final.</p> <p>The obligatory attachment to the application is the geodetic analysis on the building (project of the building) prepared by the authorized geodetic company in the earlier stage. Administrative tax for the application for entering the building into the Cadastre of buildings is EUR 19,37. The project of the building is then transferred to the authorized agency together with the application for registering the building into the Cadastre of buildings. The building is then registered in additional 2 to 3 months from the day the application (together with the obligatory attachment, i.e. geodetic analysis) was submitted to the authorized agency.</p> <p>Authorized agency is the Regional Surveying and Mapping Authority.</p>	45 days	EUR 19
12	<p><b>* Apply for water and sewerage connection</b></p> <p>Once the building permit is obtained, the investor may apply for connection approval to the Vodovod-Kanalizacija d.o.o. (hereinafter: the "utility"). The obligatory attachments are:</p> <ul style="list-style-type: none"> <li>- the building permit</li> </ul>	30 days	EUR 9,000

No.	Procedure	Time to complete	Cost to complete
	<ul style="list-style-type: none"> <li>- proof of ownership of the land</li> <li>- plan of the plot showing the position of the building on the plot</li> <li>- project of grid connection to the water and sewage network (it may be prepared by the utility or other company; the costs for the project regarding the connection to the water network amount to 240 EUR and regarding the connection to the sewage network 304 EUR).</li> </ul> <p>The connection approval must be issued free of any charge and in 30 days from the day the application was submitted.</p> <p>After the connection approval is obtained from the utility, the building (fitting) of the grid connection (external works) may start. The grid connection to the water network is usually made by the utility. The utility examines documentation to make an estimate of costs and time needed and afterwards prepares an offer for making a grid connection to the client. However, another company may be engaged to do external works as well subject to condition that the utility's approval of such company is obtained previously and subject to condition that a notice on commencement of the works is sent to the utility at least 3 days before beginning of works in order to enable the utility's supervision. The same applies to a grid connection to the sewage network which is always made by another authorized company under utility's supervision (the utility itself does not offer such services, i.e. building (fitting) a connection to the sewage network). The cost for connection to the water and sewage network is EUR 9000. The building (fitting) of the grid connection takes additional 30 days.</p> <p>After the grid connection is built, the utility examines the connection (inspection at the site). The costs of such inspection amount EUR 30 for each grid connection. If connection is in accordance with requirements stated in the connection approval, the building is connected to the network.</p> <p>For each grid connection a geodetic fixation must be made in order to enter the connection into the cadastre. Such fixation is made by the utility (the costs amount to 224 EUR for each grid connection).</p>		
13	<p><b>* Request and obtain telecommunications connection</b></p> <p>After the project conditions and approval are granted by the utility providers, it is not certain when the project will be completed. A special application to utility providers should be made after the construction of a new building is completed, so that the building gets connected to public utilities.</p>	10 days	EUR 89

\* Takes place simultaneously with another procedure.

## GETTING ELECTRICITY

Access to reliable and affordable electricity is vital for businesses. To counter weak electricity supply, many firms in developing economies have to rely on self-supply, often at a prohibitively high cost. Whether electricity is reliably available or not, the first step for a customer is always to gain access by obtaining a connection.

### What do the indicators cover?

*Doing Business* records all procedures required for a local business to obtain a permanent electricity connection and supply for a standardized warehouse, as well as the time and cost to complete them. These procedures include applications and contracts with electricity utilities, clearances from other agencies and the external and final connection works. The ranking on the ease of getting electricity is the simple average of the percentile rankings on its component indicators: procedures, time and cost. To make the data comparable across economies, several assumptions are used.

The warehouse:

- Is located in the economy's largest business city, in an area where other warehouses are located.
- Is not in a special economic zone where the connection would be eligible for subsidization or faster service.
- Has road access. The connection works involve the crossing of a road or roads but are carried out on public land.
- Is a new construction being connected to electricity for the first time.
- Has 2 stories, both above ground, with a total surface of about 1,300.6 square meters (14,000 square feet), and is built on a plot of 929 square meters (10,000 square feet).

The electricity connection:

- Is a 3-phase, 4-wire Y, 140-kilovolt-ampere (kVA) (subscribed capacity) connection.

### WHAT THE GETTING ELECTRICITY INDICATORS MEASURE

#### Procedures to obtain an electricity connection (number)

Submitting all relevant documents and obtaining all necessary clearances and permits

Completing all required notifications and receiving all necessary inspections

Obtaining external installation works and possibly purchasing material for these works

Concluding any necessary supply contract and obtaining final supply

#### Time required to complete each procedure (calendar days)

Is at least 1 calendar day

Each procedure starts on a separate day

Does not include time spent gathering information

Reflects the time spent in practice, with little follow-up and no prior contact with officials

#### Cost required to complete each procedure (% of income per capita)

Official costs only, no bribes

Excludes value added tax

- Is 150 meters long.
- Is to either the low-voltage or the medium-voltage distribution network and either overhead or underground, whichever is more common in the economy and in the area where the warehouse is located. The length of any connection in the customer's private domain is negligible.
- Involves installing one electricity meter. The monthly electricity consumption will be 0.07 gigawatt-hour (GWh). The internal electrical wiring has been completed.

## GETTING ELECTRICITY

## Where does the economy stand today?

What does it take to obtain a new electricity connection in Slovenia? According to data collected by *Doing Business*, getting electricity there requires 5

procedures, takes 38 days and costs 119.1% of income per capita (figure 4.1).

Figure 4.1 What it takes to obtain an electricity connection in Slovenia

Note: For details on the procedures reflected here, see the summary at the end of this chapter.

Source: *Doing Business* database.

## GETTING ELECTRICITY

Globally, Slovenia stands at 27 in the ranking of 183 economies on the ease of getting electricity (figure 4.2). The rankings for comparator economies and the

regional average ranking provide another perspective in assessing how easy it is for an entrepreneur in Slovenia to connect a warehouse to electricity.

Figure 4.2 How Slovenia and comparator economies rank on the ease of getting electricity

Source: *Doing Business* database.

## GETTING ELECTRICITY

Even more helpful than rankings for other economies may be the indicators underlying those rankings (table 4.1). If obtaining a new electricity connection requires fewer procedures, less time or less cost in other

economies, the practices of their utilities may provide a model for Slovenia on ways to improve the ease of getting electricity. Regional and global averages on these indicators may provide useful benchmarks.

Table 4.1 The ease of getting electricity in Slovenia and comparator economies

Indicator	Slovenia	Albania	Czech Republic	Hungary	Italy	Serbia	Slovak Republic	OECD high income average	Global average
Rank	27	154	148	103	109	79	102	53	..

## GETTING ELECTRICITY

### What are the details?

The indicators reported here for Slovenia are based on a set of specific procedures—the steps that an entrepreneur must complete to get a warehouse connected to electricity by the local distribution utility—identified by *Doing Business*. Data are collected from the distribution utility, then completed and verified by electricity regulatory agencies and independent professionals such as electrical engineers, electrical contractors and construction companies. The electricity distribution utility surveyed is the one serving the area (or areas) in which warehouses are located. If there is a choice of distribution utilities, the one serving the largest number of customers is selected.

#### OBTAINING AN ELECTRICITY CONNECTION

**City:** Ljubljana

**Name of Utility:** Elektro Ljubljana, d.d.

The procedures are those that apply to a warehouse and electricity connection matching the standard assumptions used by *Doing Business* in collecting the data (see the section in this chapter on what the indicators cover). The procedures, along with the associated time and cost, are summarized below.

#### Summary of procedures for getting electricity in Slovenia—and the time and cost

No.	Procedure	Time to complete	Cost to complete
1	<p><b>Submit application with Elektro Ljubljana and await estimate</b></p> <p>An application can be submitted in person, by mail and by e-mail. The following approvals and contracts are needed in the process of connecting a new customer to the power grid:</p> <ul style="list-style-type: none"> <li>• approval of warehouse project (Statement that the warehouse matches requirements of the power connection conditions),</li> <li>• connection approval (Detailed technical specification; metering, rights and obligations of utility and investor-owner),</li> <li>• connection contract.</li> </ul> <p>The customer has to send applications for each of those approvals and contract at the same time to the utility to the same department. In addition, the customer has to request at the same time the technical conditions from the utility. The customer is sending an application to ask for the “power connection conditions”. The technical conditions are needed to get information about the location, the point of “hook up”, the nearest substation, and the distance. This information is necessary to design the connection. Documents to be attached to apply for those approvals and the technical conditions are (varies for each one): Location, electrical power needed, project documents and ownership documents. The documents do not need to be notarized. There are no extra costs associated. The customer gets the approvals by mail or can come and pick them up. There is no external inspection. If the external connection work is done by a private electrical contractor, an inspection by the utility is done during the connection works. The customer can apply for the internal inspection at this point by submitting an extra form.</p>	25 calendar days	no charge

No.	Procedure	Time to complete	Cost to complete
2	<p><b>* Conclude supply agreement</b></p> <p>The customer has to submit a separate application for the supply contract. The utility is sending an offer back and the customer signs the contract. The contract for the new connection and the supply contract must be signed before the physical connection works start. The separation of these two functions is regulated in the EC Directive (2003/54/EC and 96/92/EC).</p>	1 calendar day	no charge
3	<p><b>Receive external connection works and installation of meter by Elektro Ljubljana</b></p> <p>Transformers usually have enough capacity to accommodate an additional load of 140kVA inside and around the motorway ring (the area where warehouses usually locate). Therefore, no extra transformer needs to be built for the new customer and the warehouse is connected via simple hook-up to the next utility distribution transformer (usually 200 meters distance). Either the utility or an outside company is in charge of the external works including designing the details of the external connection works. Both are possible (works carried out by the utility or by an electrical contractor), however it is more common to have the utility carrying out the connection works. The material is provided by the utility or the electrical contractor that would carry out the connection works. The meter gets installed at the same time as when the connection is done. It is installed either by the authorized electrical contractor or the utility that carries out the connection works.</p>	10 calendar days	EUR 19,273.0
4	<p><b>* Receive an internal inspection by a registered company</b></p> <p>An outside company that is registered for supervision confirms with a statement that the internal wiring is done according to regulations and standards. The utility is also authorized to inspect the internal wiring. The customer has to request the internal inspection with the application for connection to the network. Someone from the customer's party has to be present.</p>	8 calendar days	EUR 1,200.0
5	<p><b>Apply for final connection to power grid with Elektro Ljubljana</b></p> <p>After all documents are obtained, the connection is made and the meter is installed, the customer has to apply for a final hook up to the power grid.</p>	3 calendar days	no charge

\* Takes place simultaneously with another procedure.

Source: *Doing Business* database.

## REGISTERING PROPERTY

Ensuring formal property rights is fundamental. Effective administration of land is part of that. If formal property transfer is too costly or complicated, formal titles might go informal again. And where property is informal or poorly administered, it has little chance of being accepted as collateral for loans—limiting access to finance.

### What do the indicators cover?

*Doing Business* records the full sequence of procedures necessary for a business to purchase property from another business and transfer the property title to the buyer's name. The transaction is considered complete when it is opposable to third parties and when the buyer can use the property, use it as collateral for a bank loan or resell it. The ranking on the ease of registering property is the simple average of the percentile rankings on its component indicators: procedures, time and cost.

To make the data comparable across economies, several assumptions about the parties to the transaction, the property and the procedures are used.

The parties (buyer and seller):

- Are limited liability companies, 100% domestically and privately owned.
- Are located in the periurban area of the economy's largest business city.
- Have 50 employees each, all of whom are nationals.
- Perform general commercial activities.

The property (fully owned by the seller):

- Has a value of 50 times income per capita. The sale price equals the value.
- Is registered in the land registry or cadastre, or both, and is free of title disputes.
- Is located in a periurban commercial zone, and no rezoning is required.

### WHAT THE REGISTERING PROPERTY INDICATORS MEASURE

#### Procedures to legally transfer title on immovable property (number)

Preregistration (for example, checking for liens, notarizing sales agreement, paying property transfer taxes)

Registration in the economy's largest business city

Postregistration (for example, filing title with the municipality)

#### Time required to complete each procedure (calendar days)

Does not include time spent gathering information

Each procedure starts on a separate day

Procedure completed once final document is received

No prior contact with officials

#### Cost required to complete each procedure (% of property value)

Official costs only, no bribes

No value added or capital gains taxes included

- Has no mortgages attached and has been under the same ownership for the past 10 years.
- Consists of 557.4 square meters (6,000 square feet) of land and a 10-year-old, 2-story warehouse of 929 square meters (10,000 square feet). The warehouse is in good condition and complies with all safety standards, building codes and legal requirements. The property will be transferred in its entirety.

## REGISTERING PROPERTY

## Where does the economy stand today?

What does it take to complete a property transfer in Slovenia? According to data collected by *Doing Business*, registering property there requires 5

procedures, takes 110 days and costs 2.0% of the property value (figure 5.1).

Figure 5.1 What it takes to register property in Slovenia

Note: For details on the procedures reflected here, see the summary at the end of this chapter.

Source: *Doing Business* database.

## REGISTERING PROPERTY

Globally, Slovenia stands at 79 in the ranking of 183 economies on the ease of registering property (figure 5.2). The rankings for comparator economies and the

regional average ranking provide other useful information for assessing how easy it is for an entrepreneur in Slovenia to transfer property.

Figure 5.2 How Slovenia and comparator economies rank on the ease of registering property

Source: Doing Business database.

## REGISTERING PROPERTY

### What are the changes over time?

While the most recent *Doing Business* data reflect how easy (or difficult) it is to register property in Slovenia today, data over time show which aspects of the

process have changed—and which have not (table 5.1). That can help identify where the potential for improvement is greatest.

Table 5.1 The ease of registering property in Slovenia over time  
By *Doing Business* report year

Indicator	DB2005	DB2006	DB2007	DB2008	DB2009	DB2010	DB2011	DB2012
Rank	..	..	..	..	..	..	99	79
Procedures (number)	6	6	6	6	6	6	6	5
Time (days)	391	391	391	391	391	391	113	110
Cost (% of property value)	2.0	2.0	2.0	2.0	2.0	2.0	2.1	2.0

*Note:* n.a. = not applicable (the economy was not included in *Doing Business* for that year). DB2012 rankings reflect changes to the methodology. For more information on “no practice” marks, see the data notes for details.

*Source:* *Doing Business* database.

## REGISTERING PROPERTY

Equally helpful may be the benchmarks provided by the economies that today have the best performance regionally or globally on the procedures, time or cost required to complete a property transfer (figure 5.3).

These economies may provide a model for Slovenia on ways to improve the ease of registering property. And changes in regional averages can show where Slovenia is keeping up—and where it is falling behind.

Figure 5.3 Has registering property become easier over time?

### Procedures (number)

### Time (days)

## REGISTERING PROPERTY

## Cost (% of property value)

*Note:* The economy with the best performance regionally on each indicator, and the economy with the best performance globally, are included as benchmarks. In some cases 2 or more economies share the top regional or global ranking on an indicator. In cases where no data are displayed above for the economy, this indicates that the economy has received a “no practice” mark; see the data notes for details.

*Source:* *Doing Business* database.

## REGISTERING PROPERTY

Economies worldwide have been making it easier for entrepreneurs to register and transfer property—such as by computerizing land registries, introducing time limits for procedures and setting low fixed fees. Many

have cut the time required substantially—enabling buyers to use or mortgage their property earlier. What property registration reforms has *Doing Business* recorded in Slovenia (table 5.2)?

Table 5.2 How has Slovenia made registering property easier—or not?  
By *Doing Business* report year

DB Year	Reform
<b>DB2012</b>	Slovenia made transferring property easier and less costly by introducing online procedures and reducing fees.
<b>DB2011</b>	Greater computerization in Slovenia's land registry reduced delays in property registration by 75%.
<b>DB2010</b>	No reform.
<b>DB2009</b>	No reform.

Note: For information on reforms in earlier years (back to DB2005), see the *Doing Business* reports for these years, available at <http://www.doingbusiness.org>.

Source: *Doing Business* database.

## REGISTERING PROPERTY

### What are the details?

The indicators reported here are based on a set of specific procedures—the steps that a buyer and seller must complete to transfer the property to the buyer's name—identified by *Doing Business* through information collected from local property lawyers, notaries and property registries. These procedures are those that apply to a transaction matching the standard assumptions used by *Doing Business* in collecting the data (see the section in this chapter on what the indicators cover).

#### STANDARD PROPERTY TRANSFER

**City:** Ljubljana  
**Property Value:** 859,775.2

The procedures, along with the associated time and cost, are summarized below.

#### Summary of procedures for registering property in Slovenia—and the time and cost

No.	Procedure	Time to complete	Cost to complete
1	<p><b>Obtain ownership certificate</b></p> <p>A land registry extract should be obtained by the seller from the Land Registry as a proof of ownership. Any encumbrances on the property will appear in the extract. Obtaining this extract from the Registry in the hard-copy format would take not more than 1 day if the property info is computerized. In the rare case when the property information is not in the court's system, the extract will take longer (a few days to obtain). An electronic version of the extract in "pdf" format is obtained immediately, free of charge.</p>	1 day	No cost - obtained online
2	<p><b>Assess tax to be paid</b></p> <p>The seller is principally required to make a land tax declaration to the competent department of the Tax Administration of the Republic of Slovenia within 15 days after the day on which the purchase agreement was concluded. The Tax Administration is required to assess the land tax within 30 days of the day on which the tax declaration was made. If the purchase price of a real estate is set below the current market value and the Tax Administration cannot assess such price in due time, a temporary decision is made in order not to obstruct the transactions on the real estate market. In practice, these situations do not occur often. If the Tax Administration has doubts about the real value of the transferred real estate it can request the submission of an expert's appraisal of the value of the given real estate in order to correctly assess the Tax liability.</p> <p>The documentation shall include:          Filled-in tax declaration          Proof of ownership (e.g. land registry extract obtained in Procedure 1)          Basis for the transfer of real estate (e.g. contract)          For companies acting as buyer – copy of the court registry entry</p>	1-30 days	no cost

No.	Procedure	Time to complete	Cost to complete														
3	<p><b>Pay taxes</b></p> <p>The VAT does not have to be paid if the transaction of real estate is taxed by Real Estate Transfer Tax. VAT is obligatory only for new real estate.</p> <p>The Real Estate Transfer Tax procedure is as follows: The taxpayer has to insert the tax declaration within 15 days at the Tax Authority, after the deed of sale is signed. The Tax Authority has to assess the real estate transfer tax within 30 days after receiving the declaration. When the real estate transfer tax is assessed on the basis of the selling price, the tax must be paid at the competent Tax Administration Office within 30 days after the receipt of the decision on tax assessment. If the Tax Administration has doubts about the real value of the transferred real estate it can request the submission of an expert's appraisal of the value of the given real estate in order to correctly assess the tax liability.</p> <p>The VAT procedure is as follows: VAT by transfer of property is paid only if the seller, who is liable for VAT, agrees with the buyer of real estate, who is also liable for VAT with the right to deduct the full input VAT to charge for VAT at the prescribed rate on the supply that should be exempted from VAT. VAT rate for transfer of property is 20%, except the transfer of apartments, residential and other buildings for permanent living and other parts of buildings as part of social policy, including their building, renovation and repair, which is 8.5%.</p>	1 day	2% of property price (transfer tax)														
4	<p><b>Notarization of sale deed</b></p> <p>Full title to real estate on the basis of a purchase agreement is acquired by an entry in the land register, which creates erga omnes effects. The book-entry is only made possible on the basis of a valid land register permission ("registration clause") issued by the owner of the real estate (or other right in rem). The registration clause is an explicit, unconditional declaration by a person whose right is being transferred, altered, encumbered or extinguished permitting an entry in the land register. The registration clause can already be included in the purchase agreement or in the notarial protocol. Once the proposal is filed with the competent land registry court, the registration process is initiated ex officio and the priority of entry is ensured by way of a land registry seal. The seal in the land registry that safeguards the priority order is obtained within one day. The priority order takes effect of the day on which the proposal has been filed.</p> <p>The Property Act provides that the seller's signature on the registration clause has to be certified by a notary public. The signature cannot be certified before all taxes are paid.</p> <p>The documentation shall include: Proof of the land tax payment (e.g. official note on the agreement,</p>	1 day	<p>Notary fees for the land registry case are (in Euros):</p> <table><tr><td>Contract value</td><td>fees</td></tr><tr><td>VAT</td><td>total</td></tr><tr><td>under 4,59</td><td>4590,00</td></tr><tr><td></td><td>0,92</td></tr><tr><td></td><td>5,51</td></tr><tr><td>from 4,59</td><td>4590,00</td></tr><tr><td></td><td>13,77</td></tr></table>	Contract value	fees	VAT	total	under 4,59	4590,00		0,92		5,51	from 4,59	4590,00		13,77
Contract value	fees																
VAT	total																
under 4,59	4590,00																
	0,92																
	5,51																
from 4,59	4590,00																
	13,77																

No.	Procedure	Time to complete	Cost to complete
	obtained in Procedure 3) Purchase agreement including the land registry permission		

\* Takes place simultaneously with another procedure.

## GETTING CREDIT

Two types of frameworks can facilitate access to credit and improve its allocation: credit information systems and the legal rights of borrowers and lenders in collateral and bankruptcy laws. Credit information systems enable lenders to view a potential borrower's financial history (positive or negative)—valuable information to consider when assessing risk. And they permit borrowers to establish a good credit history that will allow easier access to credit. Sound collateral laws enable businesses to use their assets, especially movable property, as security to generate capital—while strong creditors' rights have been associated with higher ratios of private sector credit to GDP.

### What do the indicators cover?

*Doing Business* assesses the sharing of credit information and the legal rights of borrowers and lenders with respect to secured transactions through 2 sets of indicators. The depth of credit information index measures rules and practices affecting the coverage, scope and accessibility of credit information available through a public credit registry or a private credit bureau. The strength of legal rights index measures the degree to which collateral and bankruptcy laws protect the rights of borrowers and lenders and thus facilitate lending. *Doing Business* uses case scenarios to determine the scope of the secured transactions system, involving a secured borrower and a secured lender and examining legal restrictions on the use of movable collateral. These scenarios assume that the borrower:

- Is a private, limited liability company.
- Has its headquarters and only base of operations in the largest business city.

### WHAT THE GETTING CREDIT INDICATORS MEASURE

#### Strength of legal rights index (0–10)

Protection of rights of borrowers and lenders through collateral laws

Protection of secured creditors' rights through bankruptcy laws

#### Depth of credit information index (0–6)

Scope and accessibility of credit information distributed by public credit registries and private credit bureaus

#### Public credit registry coverage (% of adults)

Number of individuals and firms listed in public credit registry as percentage of adult population

#### Private credit bureau coverage (% of adults)

Number of individuals and firms listed in largest private credit bureau as percentage of adult population

- Has 100 employees.
- Is 100% domestically owned, as is the lender.

The ranking on the ease of getting credit is based on the percentile rankings on its component indicators: the depth of credit information index (weighted at 37.5%) and the strength of legal rights index (weighted at 62.5%).

## GETTING CREDIT

### Where does the economy stand today?

How well do the credit information system and collateral and bankruptcy laws in Slovenia facilitate access to credit? The economy has a score of 4 on the depth of credit information index and a score of 4 on the strength of legal rights index (see the summary of scoring at the end of this chapter for details). Higher scores indicate more credit information and stronger legal rights for borrowers and lenders.

Globally, Slovenia stands at 98 in the ranking of 183 economies on the ease of getting credit (figure 6.1). The rankings for comparator economies and the regional average ranking provide other useful information for assessing how well regulations and institutions in Slovenia support lending and borrowing.

Figure 6.1 How Slovenia and comparator economies rank on the ease of getting credit

Source: Doing Business database.

## GETTING CREDIT

### What are the changes over time?

While the most recent *Doing Business* data reflect how well the credit information system and collateral and bankruptcy laws in Slovenia support lending and borrowing today, data over time can help show where

institutions and regulations have been strengthened—and where they have not (table 6.1). That can help identify where the potential for improvement is greatest.

Table 6.1 The ease of getting credit in Slovenia over time  
By *Doing Business* report year

Indicator	DB2005	DB2006	DB2007	DB2008	DB2009	DB2010	DB2011	DB2012
Rank	..	..	..	..	..	..	96	98
Strength of legal rights index (0-10)	5	5	5	5	4	4	4	4
Depth of credit information index (0-6)	3	3	3	2	4	4	4	4
Public registry coverage (% of adults)	2.5	2.7	2.9	2.5	2.7	2.7	2.7	3.3
Private bureau coverage (% of adults)	0.0	0.0	0.0	0.0	0.0	0.0	0.0	100.0

Note: n.a. = not applicable (the economy was not included in *Doing Business* for that year). DB2012 rankings reflect changes to the methodology.

Source: *Doing Business* database.

## GETTING CREDIT

One way to put an economy's getting credit indicators into context is to see where the economy stands in the distribution of scores across other economies. Figure 6.2 highlights the score on the strength of legal rights

index for Slovenia in 2011 and shows the number of other economies having the same score in 2011. Figure 6.3 shows the same thing for the depth of credit information index.

**Figure 6.2 Have legal rights for borrowers and lenders become stronger?**

Number of economies with each score on strength of legal rights index (0–10), 2011

Source: Doing Business database.

**Figure 6.3 Have the coverage and accessibility of credit information grown?**

Number of economies with each score on depth of credit information index (0–6), 2011

Source: Doing Business database.

## GETTING CREDIT

When economies strengthen the legal rights of lenders and borrowers under collateral and bankruptcy laws, and increase the scope, coverage and accessibility of

credit information, they can increase entrepreneurs' access to credit. What credit reforms has *Doing Business* recorded in Slovenia (table 6.2)?

Table 6.2 How has Slovenia made getting credit easier—or not?  
By *Doing Business* report year

DB Year	Reform
DB2012	No reform.
DB2011	No reform.
DB2010	No reform.
DB2009	No reform.

*Note:* For information on reforms in earlier years (back to DB2005), see the *Doing Business* reports for these years, available at <http://www.doingbusiness.org>.

*Source:* *Doing Business* database.

## GETTING CREDIT

### What are the details?

The getting credit indicators reported here for Slovenia are based on detailed information collected in that economy. The data on credit information sharing are collected through a survey of a public credit registry or private credit bureau (if one exists). To construct the depth of credit information index, a score of 1 is assigned for each of 6 features of the public credit registry or private credit bureau (see summary of scoring below).

The data on the legal rights of borrowers and lenders are gathered through a survey of financial lawyers and verified through analysis of laws and regulations as well as public sources of information on collateral and bankruptcy laws. For the strength of legal rights index, a score of 1 is assigned for each of 8 aspects related to legal rights in collateral law and 2 aspects in bankruptcy law.

#### Summary of scoring for the getting credit indicators in Slovenia

Indicator	Slovenia	OECD high income	OECD high income
<b>Strength of legal rights index (0-10)</b>	4		7
<b>Depth of credit information index (0-6)</b>	4		5
<b>Public registry coverage (% of adults)</b>	3.3		9.5
<b>Private bureau coverage (% of adults)</b>	100.0		63.9

<b>Strength of legal rights index (0–10)</b>	<b>Index score: 4</b>
Can any business use movable assets as collateral while keeping possession of the assets; and any financial institution accept such assets as collateral ?	Yes
Does the law allow businesses to grant a non possessory security right in a single category of movable assets, without requiring a specific description of collateral?	No
Does the law allow businesses to grant a non possessory security right in substantially all of its assets, without requiring a specific description of collateral?	No
May a security right extend to future or after-acquired assets, and may it extend automatically to the products, proceeds or replacements of the original assets ?	No
Is a general description of debts and obligations permitted in collateral agreements; can all types of debts and obligations be secured between parties; and can the collateral agreement include a maximum amount for which the assets are encumbered?	No
Is a collateral registry in operation, that is unified geographically and by asset type, with an electronic database indexed by debtor's names?	No
Are secured creditors paid first (i.e. before general tax claims and employee claims) when a debtor defaults outside an insolvency procedure?	Yes

<b>Strength of legal rights index (0–10)</b>	<b>Index score: 4</b>
Are secured creditors paid first (i.e. before general tax claims and employee claims) when a business is liquidated?	Yes
Are secured creditors either not subject to an automatic stay or moratorium on enforcement procedures when a debtor enters a court-supervised reorganization procedure, or the law provides secured creditors with grounds for relief from an automatic stay or	No
Does the law allow parties to agree in a collateral agreement that the lender may enforce its security right out of court, at the time a security interest is created?	Yes

<b>Depth of credit information index (0–6)</b>	<b>Private credit bureau</b>	<b>Public credit registry</b>	<b>Index score: 4</b>
Are data on both firms and individuals distributed?	No	No	0
Are both positive and negative data distributed?	No	Yes	1
Does the registry distribute credit information from retailers, trade creditors or utility companies as well as financial institutions?	No	No	0
Are more than 2 years of historical credit information distributed?	Yes	Yes	1
Is data on all loans below 1% of income per capita distributed?	Yes	No	1
Is it guaranteed by law that borrowers can inspect their data in the largest credit registry?	Yes	No	1

*Note:* An economy receives a score of 1 if there is a "yes" to either private bureau or public registry.

<b>Coverage</b>	<b>Private credit bureau</b>	<b>Public credit registry</b>
<b>Number of firms</b>	..	47,048
<b>Number of individuals</b>	..	0

*Source:* Doing Business database.

## PROTECTING INVESTORS

Investor protections matter for the ability of companies to raise the capital they need to grow, innovate, diversify and compete. If the laws do not provide such protections, investors may be reluctant to invest unless they become the controlling shareholders. Strong regulations clearly define related-party transactions, promote clear and efficient disclosure requirements, require shareholder participation in major decisions of the company and set clear standards of accountability for company insiders.

### What do the indicators cover?

*Doing Business* measures the strength of minority shareholder protections against directors' use of corporate assets for personal gain—or self-dealing. The indicators distinguish 3 dimensions of investor protections: transparency of related-party transactions (extent of disclosure index), liability for self-dealing (extent of director liability index) and shareholders' ability to sue officers and directors for misconduct (ease of shareholder suits index). The ranking on the strength of investor protection index is the simple average of the percentile rankings on these 3 indices. To make the data comparable across economies, a case study uses several assumptions about the business and the transaction.

The business (Buyer):

- Is a publicly traded corporation listed on the economy's most important stock exchange (or at least a large private company with multiple shareholders).
- Has a board of directors and a chief executive officer (CEO) who may legally act on behalf of Buyer where permitted, even if this is not specifically required by law.

The transaction involves the following details:

- Mr. James, a director and the majority shareholder of the company, proposes that

### WHAT THE PROTECTING INVESTORS INDICATORS MEASURE

#### Extent of disclosure index (0–10)

- Who can approve related-party transactions
- Disclosure requirements in case of related-party transactions

#### Extent of director liability index (0–10)

- Ability of shareholders to hold interested parties and members of the approving body liable in case of related-party transactions
- Available legal remedies (damages, repayment of profits, fines, imprisonment and rescission of the transaction)
- Ability of shareholders to sue directly or derivatively

#### Ease of shareholder suits index (0–10)

- Access to internal corporate documents (directly or through a government inspector)
- Documents and information available during trial

#### Strength of investor protection index (0–10)

- Simple average of the extent of disclosure, extent of director liability and ease of shareholder suits indices

the company purchase used trucks from another company he owns.

- The price is higher than the going price for used trucks, but the transaction goes forward.
- All required approvals are obtained, and all required disclosures made, though the transaction is prejudicial to Buyer.
- Shareholders sue the interested parties and the members of the board of directors.

## PROTECTING INVESTORS

### Where does the economy stand today?

How strong are investor protections in Slovenia? The economy has a score of 6.7 on the strength of investor protection index, with a higher score indicating stronger protections (see the summary of scoring at the end of this chapter for details).

Globally, Slovenia stands at 24 in the ranking of 183 economies on the strength of investor protection

index (figure 7.1). While the indicator does not measure all aspects related to the protection of minority investors, a higher ranking does indicate that an economy's regulations offer stronger investor protections against self-dealing in the areas measured.

Figure 7.1 How Slovenia and comparator economies rank on the strength of investor protection index

Source: Doing Business database.

## PROTECTING INVESTORS

### What are the changes over time?

While the most recent *Doing Business* data reflect how well regulations in Slovenia protect minority investors today, data over time show whether the protections have been strengthened (table 7.1). And the global

ranking on the strength of investor protection index over time shows whether the economy is slipping behind other economies in investor protections—or surpassing them.

Table 7.1 The strength of investor protections in Slovenia over time  
By *Doing Business* report year

Indicator	DB2006	DB2007	DB2008	DB2009	DB2010	DB2011	DB2012
Rank	..	..	..	..	..	21	24
Extent of disclosure index (0-10)	3	3	3	3	3	3	3
Extent of director liability index (0-10)	8	8	8	9	9	9	9
Ease of shareholder suits index (0-10)	8	8	8	8	8	8	8
Strength of investor protection index (0-10)	6.3	6.3	6.3	6.7	6.7	6.7	6.7

Note: n.a. = not applicable (the economy was not included in *Doing Business* for that year). DB2012 rankings reflect changes to the methodology.

Source: *Doing Business* database.

## PROTECTING INVESTORS

But the overall ranking on the strength of investor protection index tells only part of the story. Economies may offer strong protections in some areas but not others. So the scores recorded over time for Slovenia on the extent of disclosure, extent of director liability

and ease of shareholder suits indices may also be revealing (figure 7.2). Equally interesting may be the changes over time in the regional average scores for those indices.

Figure 7.2 Have investor protections become stronger?

### Strength of investor protection index (0-10)

### Extent of disclosure index (0-10)

## PROTECTING INVESTORS

## Extent of director liability index (0-10)

## Ease of shareholder suits index (0-10)

*Note:* The higher the score, the stronger the investor protections. The economy with the best performance regionally on each indicator, and the economy with the best performance globally, are included as benchmarks. In some cases 2 or more economies share the top regional or global ranking on an indicator.

*Source:* Doing Business database.

## PROTECTING INVESTORS

Economies with the strongest protections of minority investors from self-dealing require more disclosure and define clear duties for directors. They also have well-functioning courts and up-to-date procedural rules that give minority investors the means to prove their case and obtain a judgment within a reasonable

time. So reforms to strengthen investor protections may move ahead on different fronts—such as through new or amended company laws or civil procedure rules. What investor protection reforms has *Doing Business* recorded in Slovenia (table 7.2)?

**Table 7.2 How has Slovenia strengthened investor protections—or not?**  
By *Doing Business* report year

DB Year	Reform
<b>DB2012</b>	No reform.
<b>DB2011</b>	No reform.
<b>DB2010</b>	No reform.
<b>DB2009</b>	A new law protects minority investors by allowing them to sue directors on behalf of the company.

*Note:* For information on reforms in earlier years (back to DB2006), see the *Doing Business* reports for these years, available at <http://www.doingbusiness.org>.

*Source:* *Doing Business* database.

## PROTECTING INVESTORS

### What are the details?

The protecting investors indicators reported here for Slovenia are based on detailed information collected through a survey of corporate and securities lawyers and are based on securities regulations, company laws and court rules of evidence. To construct the extent of disclosure, extent of director liability and ease of

shareholder suits indices, a score is assigned for each of a range of conditions relating to disclosure, director liability and shareholder suits in a standard case study transaction (see the notes at the end of this chapter). The summary below shows the details underlying the scores for Slovenia.

#### Summary of scoring for the protecting investors indicators in Slovenia

Indicator	Slovenia	OECD high income	OECD high income
<b>Extent of disclosure index (0-10)</b>	3		6
<b>Extent of director liability index (0-10)</b>	9		5
<b>Ease of shareholder suits index (0-10)</b>	8		7
<b>Strength of investor protection index (0-10)</b>	6.7		6.0

	Score
Extent of disclosure index (0-10)	3
What corporate body provides legally sufficient approval for the transaction?	0
Whether disclosure of the conflict of interest by Mr. James to the board of directors is required?	1
Whether immediate disclosure of the transaction to the public and/or shareholders is required?	0
Whether disclosure of the transaction in published periodic filings (annual reports) is required?	2
Whether an external body must review the terms of the transaction before it takes place?	0
Extent of director liability index (0-10)	9
Whether shareholders can sue directly or derivatively for the damage that the Buyer-Seller transaction causes to the company?	1
Whether shareholders can hold Mr. James liable for the damage that the Buyer-Seller transaction causes to the company?	2
Whether shareholders can hold members of the approving body liable for the damage that the Buyer-Seller transaction causes to the company?	2
Whether a court can void the transaction upon a successful claim by a shareholder plaintiff?	1

	Score
Whether Mr. James pays damages for the harm caused to the company upon a successful claim by the shareholder plaintiff?	1
Whether Mr. James repays profits made from the transaction upon a successful claim by the shareholder plaintiff?	1
Whether fines and imprisonment can be applied against Mr. James?	1
Ease of shareholder suits index (0-10)	8
Whether shareholders owning 10% or less of Buyer's shares can inspect transaction documents before filing suit?	0
Whether shareholders owning 10% or less of Buyer's shares can request an inspector to investigate the transaction?	1
Whether the plaintiff can obtain any documents from the defendant and witnesses during trial?	4
Whether the plaintiff can request categories of documents from the defendant without identifying specific ones?	0
Whether the plaintiff can directly question the defendant and witnesses during trial?	2
Whether the level of proof required for civil suits is lower than that of criminal cases?	1
Strength of investor protection index (0-10)	6.7

Source: *Doing Business* database.

## Notes:

### Extent of disclosure index (0–10)

Scoring for the extent of disclosure index is based on 5 components:

*Which corporate body can provide legally sufficient approval for the transaction*

0 = CEO or managing director alone; 1 = shareholders or board of directors vote and Mr. James can vote; 2 = board of directors votes and Mr. James cannot vote; 3 = shareholders vote and Mr. James cannot vote.

*Whether disclosure of the conflict of interest by Mr. James to the board of directors is required*

0 = no disclosure; 1 = disclosure of the existence of a conflict without any specifics; 2 = full disclosure of all material facts.

*Whether immediate disclosure of the transaction to the public, the regulator or the shareholders is required*

0 = no disclosure; 1 = disclosure on the transaction only; 2 = disclosure on the transaction and Mr. James's conflict of interest.

*Whether disclosure of the transaction in the annual report is required*

0 = no disclosure; 1 = disclosure on the transaction only; 2 = disclosure on the transaction and Mr. James's conflict of interest.

*Whether it is required that an external body (for example, an external auditor) review the transaction before it takes place*

0 = no; 1 = yes.

### **Extent of director liability index (0–10)**

Scoring for the extent of director liability index is based on 7 components:

*Whether shareholders can sue directly or derivatively for the damage that the Buyer-Seller transaction causes to the company*

0 = suits are unavailable or available only for shareholders holding more than 10% of the company's share capital; 1 = direct or derivative suits available for shareholders holding 10% of share capital or less.

*Whether shareholders can hold Mr. James liable for the damage that the transaction causes to the company*

0 = Mr. James is not liable or is liable only if he acted fraudulently or in bad faith; 1 = Mr. James is liable if he influenced the approval or was negligent; 2 = Mr. James is liable if the transaction is unfair or prejudicial to the other shareholders.

*Whether shareholders can hold the approving body (the CEO or members of the board of directors) liable for the damage that the transaction causes to the company*

0 = members of the approving body are either not liable or liable only if they acted fraudulently or in bad faith; 1 = liable for negligence in the approval of the transaction; 2 = liable if the transaction is unfair or prejudicial to the other shareholders.

*Whether a court can void the transaction upon a successful claim by a shareholder plaintiff*

0 = rescission is unavailable or available only in case of Seller's fraud or bad faith; 1 = rescission is available when the transaction is oppressive or prejudicial to the other shareholders; 2 = rescission is available when the transaction is unfair or entails a conflict of interest.

*Whether Mr. James pays damages for the harm caused to the company upon a successful claim by the shareholder plaintiff*

0 = no; 1 = yes.

*Whether Mr. James repays profits made from the transaction upon a successful claim by the shareholder plaintiff*

0 = no; 1 = yes.

*Whether both fines and imprisonment can be applied against Mr. James*

0 = no; 1 = yes.

### **Ease of shareholder suits index (0–10)**

Scoring for the ease of shareholder suits index is based on 6 components:

*What range of documents is available to the plaintiff from the defendant and witnesses during trial*

Score of 1 for each of the following: information that the defendant has indicated he intends to rely on for his defense; information that directly proves specific facts in the plaintiff's claim; any information relevant to the subject matter of the claim; and any information that may lead to the discovery of relevant information.

*Whether the plaintiff can directly examine the defendant and witnesses during trial*

0 = no; 1 = yes, with prior approval by the court of the questions posed; 2 = yes, without prior approval.

*Whether the plaintiff can obtain categories of relevant documents from the defendant without identifying each document specifically*

0 = no; 1 = yes.

*Whether shareholders owning 10% or less of the company's share capital can request that a government inspector investigate the transaction without filing suit in court*

0 = no; 1 = yes.

*Whether shareholders owning 10% or less of the company's share capital have the right to inspect the transaction documents before filing suit*

0 = no; 1 = yes.

*Whether the standard of proof for civil suits is lower than that for a criminal case*

0 = no; 1 = yes.

#### **Strength of investor protection index (0–10)**

Simple average of the extent of disclosure, extent of director liability and ease of shareholder suits indices.

## PAYING TAXES

Taxes are essential. They fund the public amenities, infrastructure and services that are crucial for a properly functioning economy. But the level of tax rates needs to be carefully chosen—and needless complexity in tax rules avoided. According to *Doing Business* data, in economies where it is more difficult and costly to pay taxes, larger shares of economic activity end up in the informal sector—where businesses pay no taxes at all.

### What do the indicators cover?

Using a case scenario, *Doing Business* measures the taxes and mandatory contributions that a medium-size company must pay in a given year as well as the administrative burden of paying taxes and contributions. This case scenario uses a set of financial statements and assumptions about transactions made over the year. Information is also compiled on the frequency of filing and payments as well as time taken to comply with tax laws. The ranking on the ease of paying taxes is the simple average of the percentile rankings on its component indicators: number of annual payments, time and total tax rate, with a threshold being applied to the total tax rate.<sup>2</sup> To make the data comparable across economies, several assumptions about the business and the taxes and contributions are used.

- TaxpayerCo is a medium-size business that started operations on January 1, 2009.
- The business starts from the same financial position in each economy. All the taxes and mandatory contributions paid during the second year of operation are recorded.
- Taxes and mandatory contributions are measured at all levels of government.

### WHAT THE PAYING TAXES INDICATORS MEASURE

#### Tax payments for a manufacturing company in 2010 (number per year adjusted for electronic or joint filing and payment)

Total number of taxes and contributions paid, including consumption taxes (value added tax, sales tax or goods and service tax)

Method and frequency of filing and payment

#### Time required to comply with 3 major taxes (hours per year)

Collecting information and computing the tax payable

Completing tax return forms, filing with proper agencies

Arranging payment or withholding

Preparing separate tax accounting books, if required

#### Total tax rate (% of profit before all taxes)

Profit or corporate income tax

Social contributions and labor taxes paid by the employer

Property and property transfer taxes

Dividend, capital gains and financial transactions taxes

Waste collection, vehicle, road and other taxes

- Taxes and mandatory contributions include corporate income tax, turnover tax and all labor taxes and contributions paid by the company.
- A range of standard deductions and exemptions are also recorded.

<sup>2</sup> The threshold is defined as the highest total tax rate among the top 30% of economies in the ranking on the total tax rate. It will be calculated and adjusted on a yearly basis. The threshold is not based on any underlying theory. Instead, it is intended to mitigate the effect of very low tax rates on the ranking on the ease of paying taxes.

## PAYING TAXES

### Where does the economy stand today?

What is the administrative burden of complying with taxes in Slovenia—and how much do firms pay in taxes? On average, firms make 22 tax payments a year, spend 260 hours a year filing, preparing and paying taxes and pay total taxes amounting to 14.1% of profit (see the summary at the end of this chapter for details).

Globally, Slovenia stands at 87 in the ranking of 183 economies on the ease of paying taxes (figure 8.1). The rankings for comparator economies and the regional average ranking provide other useful information for assessing the tax compliance burden for businesses in Slovenia.

Figure 8.1 How Slovenia and comparator economies rank on the ease of paying taxes

Note: DB2012 rankings reflect changes to the methodology. For all economies with a total tax rate below the threshold of 32.5% applied in DB2012, the total tax rate is set at 32.5% for the purpose of calculating the ranking on the ease of paying taxes.

Source: *Doing Business* database.

## PAYING TAXES

### What are the changes over time?

While the most recent *Doing Business* data reflect how easy (or difficult) it is to comply with tax rules in Slovenia today, data over time show which aspects of

the process have changed — and which have not (table 8.1). That can help identify where the potential for easing tax compliance is greatest.

Table 8.1 The ease of paying taxes in Slovenia over time  
By *Doing Business* report year

Indicator	DB2006	DB2007	DB2008	DB2009	DB2010	DB2011	DB2012
<b>Rank</b>	..	..	..	..	..	86	87
<b>Payments (number per year)</b>	22	22	22	22	22	22	22
<b>Time (hours per year)</b>	260	260	260	260	260	260	260
<b>Total tax rate (% profit)</b>	40.0	40.0	39.2	36.7	37.5	35.4	34.7

*Note:* n.a. = not applicable (the economy was not included in *Doing Business* for that year). DB2012 rankings reflect changes to the methodology. For all economies with a total tax rate below the threshold of 32.5% applied in DB2012, the total tax rate is set at 32.5% for the purpose of calculating the rank on the ease of paying taxes.

*Source:* *Doing Business* database.

## PAYING TAXES

Equally helpful may be the benchmarks provided by the economies that today have the best performance regionally or globally on the number of payments or the time required to prepare and file taxes (figure 8.2). These economies may provide a model for Slovenia on

ways to ease the administrative burden of tax compliance. And changes in regional averages can show where Slovenia is keeping up—and where it is falling behind.

Figure 8.2 Has paying taxes become easier over time?

### Payments (number per year)

### Time (hours per year)

## PAYING TAXES

## Total tax rate (% of profit)

*Note:* The economy with the best performance regionally on each indicator, and the economy with the best performance globally, are included as benchmarks. The best performer globally on an indicator has implemented the most efficient practices in its tax system but is not necessarily the one with the highest ranking on the indicator. In some cases 2 or more economies share the top regional ranking on an indicator. DB2012 rankings reflect changes to the methodology. For all economies with a total tax rate below the threshold of 32.5% applied in DB2012, the total tax rate is set at 32.5% for the purpose of calculating the ranking on the ease of paying taxes.

*Source:* Doing Business database.

## PAYING TAXES

Economies around the world have made paying taxes faster and easier for businesses—such as by consolidating filings, reducing the frequency of payments or offering electronic filing and payment. Many have lowered tax rates. Changes have brought

concrete results. Some economies simplifying tax payment and reducing rates have seen tax revenue rise. What tax reforms has *Doing Business* recorded in Slovenia (table 8.2)?

Table 8.2 How has Slovenia made paying taxes easier—or not?  
By *Doing Business* report year

DB Year	Reform
DB2012	No reform.
DB2011	Slovenia abolished its payroll tax and reduced its corporate income tax rate.
DB2010	No reform.
DB2009	No reform.

*Note:* For information on reforms in earlier years (back to DB2006), see the *Doing Business* reports for these years, available at <http://www.doingbusiness.org>.

*Source:* *Doing Business* database.

## PAYING TAXES

### What are the details?

The indicators reported here for Slovenia are based on a standard set of taxes and contributions that would be paid by the case study company used by *Doing Business* in collecting the data (see the section in this chapter on what the indicators cover). Tax practitioners are asked to review standard financial statements as well as a standard list of transactions that the company

completed during the year. Respondents are asked how much in taxes and mandatory contributions the business must pay and what the process is for doing so. The taxes and contributions paid are listed in the summary below, along with the associated number of payments, time and tax rate.

#### Summary of tax rates and administrative burden in Slovenia

Indicator	Slovenia	OECD high income	OECD high income
Payments (number per year)	22		13
Time (hours per year)	260		186
Profit tax (%)	14.1		15.4
Labor tax and contributions (%)	18.2		24.0
Other taxes (%)	2.4		3.2
Total tax rate (% profit)	34.7		42.7

Tax or mandatory contribution	Payments (number)	Notes on payments	Time (hours)	Statutory tax rate	Tax base	Total tax rate (% of profit)	Notes on total tax rate
Social security contributions	12		96	16.10%	gross salaries	18.2	
Corporate income tax	1	online filing	90	20.0%	taxable profits	14.1	
Property transfer tax	1		0	2.00%	market value of property sold	1.2	
Fuel tax	1		0		included in fuel price	1	
Property tax (local duties)	4		0	various rates	type and value of construction	0.1	

Tax or mandatory contribution	Payments (number)	Notes on payments	Time (hours)	Statutory tax rate	Tax base	Total tax rate (% of profit)	Notes on total tax rate
<b>Tax on insurance</b>	1		0	6.50%	insurance premium	0.1	
<b>Road tax</b>	1		0	various rates	type and weight of vehicle	0.1	
<b>Value added tax (VAT)</b>	1	online filing	74	20.00%	value added	0	not included
<b>Totals</b>	<b>22</b>		<b>260</b>			<b>34.7</b>	

*Note:* DB2012 rankings reflect changes to the methodology. For all economies with a total tax rate below the threshold of 32.5% applied in DB2012, the total tax rate is set at 32.5% for the purpose of calculating the ranking on the ease of paying taxes.

*Source:* Doing Business database.

## TRADING ACROSS BORDERS

In today's globalized world, making trade between economies easier is increasingly important for business. Excessive document requirements, burdensome customs procedures, inefficient port operations and inadequate infrastructure all lead to extra costs and delays for exporters and importers, stifling trade potential. Research shows that exporters in developing countries gain more from a 10% drop in their trading costs than from a similar reduction in the tariffs applied to their products in global markets.

### What do the indicators cover?

*Doing Business* measures the time and cost (excluding tariffs) associated with exporting and importing a standard shipment of goods by ocean transport, and the number of documents necessary to complete the transaction. The indicators cover procedural requirements such as documentation requirements and procedures at customs and other regulatory agencies as well as at the port. They also cover trade logistics, including the time and cost of inland transport to the largest business city. The ranking on the ease of trading across borders is the simple average of the percentile rankings on its component indicators: documents, time and cost to export and import.

To make the data comparable across economies, *Doing Business* uses several assumptions about the business and the traded goods.

The business:

- Is of medium size and employs 60 people.
- Is located in the periurban area of the economy's largest business city.
- Is a private, limited liability company, domestically owned, formally registered and operating under commercial laws and regulations of the economy.

The traded goods:

- Are not hazardous nor do they include military items.

### WHAT THE TRADING ACROSS BORDERS INDICATORS MEASURE

#### Documents required to export and import (number)

- Bank documents
- Customs clearance documents
- Port and terminal handling documents
- Transport documents

#### Time required to export and import (days)

- Obtaining all the documents
- Inland transport and handling
- Customs clearance and inspections
- Port and terminal handling
- Does not include ocean transport time

#### Cost required to export and import (US\$ per container)

- All documentation
- Inland transport and handling
- Customs clearance and inspections
- Port and terminal handling
- Official costs only, no bribes

- Do not require refrigeration or any other special environment.
- Do not require any special phytosanitary or environmental safety standards other than accepted international standards.
- Are one of the economy's leading export or import products.
- Are transported in a dry-cargo, 20-foot full container load.

## TRADING ACROSS BORDERS

### Where does the economy stand today?

What does it take to export or import in Slovenia? According to data collected by *Doing Business*, exporting a standard container of goods requires 6 documents, takes 16 days and costs \$710. Importing the same container of goods requires 8 documents, takes 15 days and costs \$765 (see the summary of procedures and documents at the end of this chapter for details).

Globally, Slovenia stands at 50 in the ranking of 183 economies on the ease of trading across borders (figure 9.1). The rankings for comparator economies and the regional average ranking provide other useful information for assessing how easy it is for a business in Slovenia to export and import goods.

Figure 9.1 How Slovenia and comparator economies rank on the ease of trading across borders

Source: *Doing Business* database.

## TRADING ACROSS BORDERS

### What are the changes over time?

While the most recent *Doing Business* data reflect how easy (or difficult) it is to export or import in Slovenia today, data over time show which aspects of the

process have changed—and which have not (table 9.1). That can help identify where the potential for improvement is greatest.

Table 9.1 The ease of trading across borders in Slovenia over time  
By *Doing Business* report year

Indicator	DB2006	DB2007	DB2008	DB2009	DB2010	DB2011	DB2012
Rank	..	..	..	..	..	60	50
Documents to export (number)	6	6	6	6	6	6	6
Time to export (days)	20	20	20	20	20	19	16
Cost to export (US\$ per container)	971	971	971	1,075	1,075	710	710
Documents to import (number)	8	8	8	8	8	8	8
Time to import (days)	21	21	21	21	21	17	15
Cost to import (US\$ per container)	1,019	1,019	1,019	1,130	1,130	765	765

Note: n.a. = not applicable (the economy was not included in *Doing Business* for that year). DB2012 rankings reflect changes to the methodology.

Source: *Doing Business* database.

Equally helpful may be the benchmarks provided by the economies that today have the best performance regionally or globally on the documents, time or cost required to export or import (figure 9.2). These

economies may provide a model for Slovenia on ways to improve the ease of trading across borders. And changes in regional averages can show where Slovenia is keeping up—and where it is falling behind.

## TRADING ACROSS BORDERS

Figure 9.2 Has trading across borders become easier over time?

## Cost to import (US\$ per container)

*Note:* The economy with the best performance regionally on each indicator, and the economy with the best performance globally, are included as benchmarks. In some cases 2 or more economies share the top regional or global ranking on an indicator.

*Source:* Doing Business database.

## TRADING ACROSS BORDERS

In economies around the world, trading across borders as measured by *Doing Business* has become faster and easier over the years. Governments have introduced tools to facilitate trade—including single windows, risk-based inspections and electronic data interchange

systems. These changes help improve the trading environment and boost firms' international competitiveness. What trade reforms has *Doing Business* recorded in Slovenia (table 9.2)?

Table 9.2 How has Slovenia made trading across borders easier—or not?  
By *Doing Business* report year

DB Year	Reform
DB2012	Slovenia made trading across borders faster by introducing online submission of customs declaration forms.
DB2011	No reform.
DB2010	No reform.
DB2009	No reform.

Note: For information on reforms in earlier years (back to DB2006), see the *Doing Business* reports for these years, available at <http://www.doingbusiness.org>.

Source: *Doing Business* database.

## TRADING ACROSS BORDERS

### What are the details?

The indicators reported here for Slovenia are based on a set of specific procedural requirements for trading a standard shipment of goods by ocean transport (see the section in this chapter on what the indicators cover). Information on the procedures as well as the required documents and the time and cost to complete each procedure is collected from local

freight forwarders, shipping lines, customs brokers, port officials and banks. The procedural requirements, and the associated time and cost, for exporting and importing a standard shipment of goods are listed in the summary below, along with the required documents.

#### Summary of procedures and documents for trading across borders in Slovenia

Indicator	Slovenia	OECD high income	OECD high income
<b>Documents to export (number)</b>	6		4
<b>Time to export (days)</b>	16		10
<b>Cost to export (US\$ per container)</b>	710		1,032
<b>Documents to import (number)</b>	8		5
<b>Time to import (days)</b>	15		11
<b>Cost to import (US\$ per container)</b>	765		1,085

Procedures to export	Time (days)	Cost (US\$)
Documents preparation	10	100
Customs clearance and technical control	1	60
Ports and terminal handling	3	200
Inland transportation and handling	2	350
Totals	16	710

Procedures to import	Time (days)	Cost (US\$)
Documents preparation	9	130
Customs clearance and technical control	2	85
Ports and terminal handling	3	200
Inland transportation and handling	1	350
Totals	15	765

## TRADING ACROSS BORDERS

Documents to export
Bill of lading
Certificate of origin
Commercial Invoice
Customs export declaration
Packing List
Terminal handling receipts

Documents to import
Bill of lading
Cargo release order
Commercial invoice
Customs import declaration
Customs transit document
Packing list
Technical standard certificate
Terminal handling receipts

## ENFORCING CONTRACTS

Well-functioning courts help businesses expand their network and markets. Without effective contract enforcement, people might well do business only with family, friends and others with whom they have established relationships. Where contract enforcement is efficient, firms are more likely to engage with new borrowers or customers, and they have greater access to credit.

### What do the indicators cover?

*Doing Business* measures the efficiency of the judicial system in resolving a commercial dispute before local courts. Following the step-by-step evolution of a standardized case study, it collects data relating to the time, cost and procedural complexity of resolving a commercial lawsuit. The ranking on the ease of enforcing contracts is the simple average of the percentile rankings on its component indicators: procedures, time and cost.

The dispute in the case study involves the breach of a sales contract between 2 domestic businesses. The case study assumes that the court hears an expert on the quality of the goods in dispute. This distinguishes the case from simple debt enforcement. To make the data comparable across economies, *Doing Business* uses several assumptions about the case:

- The seller and buyer are located in the economy's largest business city.
- The buyer orders custom-made goods, then fails to pay.
- The seller sues the buyer before a competent court.
- The value of the claim is 200% of income per capita.
- The seller requests a pretrial attachment to secure the claim.

### WHAT THE ENFORCING CONTRACTS INDICATORS MEASURE

#### Procedures to enforce a contract through the courts (number)

Any interaction between the parties in a commercial dispute, or between them and the judge or court officer

Steps to file and serve the case

Steps for trial and judgment

Steps to enforce the judgment

#### Time required to complete procedures (calendar days)

Time to file and serve the case

Time for trial and obtaining judgment

Time to enforce the judgment

#### Cost required to complete procedures (% of claim)

No bribes

Average attorney fees

Court costs, including expert fees

Enforcement costs

- The dispute on the quality of the goods requires an expert opinion.
- The judge decides in favor of the seller; there is no appeal.
- The seller enforces the judgment through a public sale of the buyer's movable assets.

## ENFORCING CONTRACTS

### Where does the economy stand today?

How efficient is the process of resolving a commercial dispute through the courts in Slovenia? According to data collected by *Doing Business*, enforcing a contract requires 32 procedures, takes 1290 days and costs 12.7% of the value of the claim (see the summary at the end of this chapter for details).

Globally, Slovenia stands at 58 in the ranking of 183 economies on the ease of enforcing contracts (figure 10.1). The rankings for comparator economies and the regional average ranking provide other useful benchmarks for assessing the efficiency of contract enforcement in Slovenia.

Figure 10.1 How Slovenia and comparator economies rank on the ease of enforcing contracts

Source: *Doing Business* database.

## ENFORCING CONTRACTS

### What are the changes over time?

While the most recent *Doing Business* data reflect how easy (or difficult) it is to enforce a contract in Slovenia today, data on the underlying indicators over time help

identify which areas have changed and where the potential for improvement is greatest (table 10.1).

Table 10.1 The ease of enforcing contracts in Slovenia over time  
By *Doing Business* report year

Indicator	DB2004	DB2005	DB2006	DB2007	DB2008	DB2009	DB2010	DB2011	DB2012
Rank	..	..	..	..	..	..	..	58	58
Time (days)	1,440	1,440	1,350	1,350	1,350	1,350	1,290	1,290	1,290
Cost (% of claim)	19.7	19.7	18.6	18.6	18.6	18.6	12.7	12.7	12.7
Procedures (number)	32	32	32	32	32	32	32	32	32

Note: n.a. = not applicable (the economy was not included in *Doing Business* for that year). DB2012 rankings reflect changes to the methodology.

Source: *Doing Business* database.

## ENFORCING CONTRACTS

Equally helpful may be the benchmarks provided by the economies that today have the best performance regionally or globally on the number of steps, time or cost required to enforce a contract through the courts (figure 10.2). These economies may provide a model

for Slovenia on ways to improve the efficiency of contract enforcement. And changes in regional averages can show where Slovenia is keeping up—and where it is falling behind.

Figure 10.2 Has enforcing contracts become easier over time?

### Procedures (number)

## ENFORCING CONTRACTS

## Cost (% of claim)

*Note:* The economy with the best performance regionally on each indicator, and the economy with the best performance globally, are included as benchmarks. In some cases 2 or more economies share the top regional or global ranking on an indicator.

*Source:* *Doing Business* database.

## ENFORCING CONTRACTS

Economies in all regions have improved contract enforcement in recent years. A judiciary can be improved in different ways. Higher-income economies tend to look for ways to enhance efficiency by introducing new technology. Lower-income economies

often work on reducing backlogs by introducing periodic reviews to clear inactive cases from the docket and by making procedures faster. What reforms making it easier (or more difficult) to enforce contracts has *Doing Business* recorded in Slovenia (table 10.2)?

Table 10.2 How has Slovenia made enforcing contracts easier—or not?  
By *Doing Business* report year

DB Year	Reform
DB2012	No reform.
DB2011	No reform.
DB2010	No reform.
DB2009	No reform.

Note: For information on reforms in earlier years (back to DB2005), see the *Doing Business* reports for these years, available at <http://www.doingbusiness.org>.

## ENFORCING CONTRACTS

### What are the details?

The indicators reported here for Slovenia are based on a set of specific procedural steps required to resolve a standardized commercial dispute through the courts (see the section in this chapter on what the indicators cover). These procedures, and the time and cost of completing them, are identified through study of the

codes of civil procedure and other court regulations, as well as through surveys completed by local litigation lawyers (and, in a quarter of the economies covered by *Doing Business*, by judges as well). The procedures for resolving a commercial lawsuit, and the associated time and cost, are listed in the summary below.

#### Summary of procedures for enforcing a contract in Slovenia—and the time and cost

Indicator	Slovenia	OECD high income	OECD high income
<b>Time (days)</b>	1290	518.03	518.03
<b>Filing and service</b>	30		
<b>Trial and judgment</b>	930		
<b>Enforcement of judgment</b>	330		
<b>Cost (% of claim)</b>	12.7	19.71	19.71
<b>Attorney cost (% of claim)</b>	7.64		
<b>Court cost (% of claim)</b>	3.5		
<b>Enforcement Cost (% of claim)</b>	1.57		
<b>Procedures (number)</b>	32	31.42	31.42

## RESOLVING INSOLVENCY

A robust bankruptcy system functions as a filter, ensuring the survival of economically efficient companies and reallocating the resources of inefficient ones. Fast and cheap insolvency proceedings result in the speedy return of businesses to normal operation and increase returns to creditors. By improving the expectations of creditors and debtors about the outcome of insolvency proceedings, well-functioning insolvency systems can facilitate access to finance, save more viable businesses and thereby improve growth and sustainability in the economy overall.

### What do the indicators cover?

*Doing Business* studies the time, cost and outcome of insolvency proceedings involving domestic entities. It does not measure insolvency proceedings of individuals and financial institutions. The data are derived from survey responses by local insolvency practitioners and verified through a study of laws and regulations as well as public information on bankruptcy systems.

The ranking on the ease of resolving insolvency is based on the recovery rate, which is recorded as cents on the dollar recouped by creditors through reorganization, liquidation or debt enforcement (foreclosure) proceedings. The recovery rate is a function of time, cost and other factors, such as lending rate and the likelihood of the company continuing to operate.

To make the data comparable across economies, *Doing Business* uses several assumptions about the business and the case. It assumes that the company:

- Is a domestically owned, limited liability company operating a hotel.
- Operates in the economy's largest business city.

### WHAT THE RESOLVING INSOLVENCY INDICATORS MEASURE

#### Time required to recover debt (years)

Measured in calendar years

Appeals and requests for extension are included

#### Cost required to recover debt (% of debtor's estate)

Measured as percentage of estate value

Court fees

Fees of insolvency administrators

Lawyers' fees

Assessors' and auctioneers' fees

Other related fees

#### Recovery rate for creditors (cents on the dollar)

Measures the cents on the dollar recovered by creditors

Present value of debt recovered

Official costs of the insolvency proceedings are deducted

Depreciation of furniture is taken into account

Outcome for the business (survival or not) affects the maximum value that can be recovered

- Has 201 employees, 1 main secured creditor and 50 unsecured creditors.
- Has a higher value as a going concern—and the efficient outcome is either reorganization or sale as a going concern, not piecemeal liquidation.

## RESOLVING INSOLVENCY

### Where does the economy stand today?

Speed, low costs and continuation of viable businesses characterize the top-performing economies. How efficient are insolvency proceedings in Slovenia? According to data collected by *Doing Business*, resolving insolvency takes 2.0 years on average and costs 4% of the debtor's estate. The average recovery rate is 51.1 cents on the dollar.

Globally, Slovenia stands at 39 in the ranking of 183 economies on the ease of resolving insolvency (figure 11.1). The rankings for comparator economies and the regional average ranking provide other useful benchmarks for assessing the efficiency of insolvency proceedings in Slovenia.

Figure 11.1 How Slovenia and comparator economies rank on the ease of resolving insolvency

Source: *Doing Business* database.

## RESOLVING INSOLVENCY

### What are the changes over time?

While the most recent *Doing Business* data reflect the efficiency of insolvency proceedings in Slovenia today, data over time show where the efficiency has changed—and where it has not (table 11.1). That can help identify where the potential for improvement is greatest.

Table 11.1 The ease of resolving insolvency in Slovenia over time  
By *Doing Business* report year

Indicator	DB2004	DB2005	DB2006	DB2007	DB2008	DB2009	DB2010	DB2011	DB2012
<b>Rank</b>	..	..	..	..	..	..	..	38	39
<b>Time (years)</b>	2.0	2.0	2.0	2.0	2.0	2.0	2.0	2.0	2.0
<b>Cost (% of estate)</b>	8	8	8	8	8	8	8	4	4
<b>Recovery rate (cents on the dollar)</b>	41.6	42.4	44.0	44.9	46.6	45.5	45.5	50.9	51.1

Note: n.a. = not applicable (the economy was not included in *Doing Business* for that year). DB2012 rankings reflect changes to the methodology. "No practice" indicates that in each of the previous 5 years the economy had no cases involving a judicial reorganization, judicial liquidation or debt enforcement procedure (foreclosure). This means that creditors are unlikely to recover their money through a formal legal process (in or out of court). The recovery rate for "no practice" economies is 0.

Source: *Doing Business* database.

## RESOLVING INSOLVENCY

Equally helpful may be the benchmarks provided by the economies that today have the best performance regionally or globally on the time or cost of insolvency proceedings or on the recovery rate (figure 11.2). These economies may provide a model for Slovenia on

ways to improve the efficiency of insolvency proceedings. And changes in regional averages can show where Slovenia is keeping up—and where it is falling behind.

Figure 11.2 Has resolving insolvency become easier over time?

### Time (years)

### Cost (% of estate)

## RESOLVING INSOLVENCY

## Recovery rate (cents on the dollar)

*Note:* The economy with the best performance regionally on each indicator, and the economy with the best performance globally, are included as benchmarks. In some cases 2 or more economies share the top regional or global ranking on an indicator. In cases where no data are displayed above for the economy, this indicates that the economy has received a “no practice” mark; see the data notes for details.

*Source:* *Doing Business* database.

## RESOLVING INSOLVENCY

A well-balanced bankruptcy system distinguishes companies that are financially distressed but economically viable from inefficient companies that should be liquidated. But in some insolvency systems even viable businesses are liquidated. This is starting to

change. Many recent reforms of bankruptcy laws have been aimed at helping more of the viable businesses survive. What insolvency reforms has *Doing Business* recorded in Slovenia (table 11.2)?

Table 11.2 How has Slovenia made resolving insolvency easier—or not?  
By *Doing Business* report year

DB Year	Reform
<b>DB2012</b>	Slovenia simplified and streamlined the insolvency process and strengthened professional requirements for insolvency administrators.
<b>DB2011</b>	No reform.
<b>DB2010</b>	No reform.
<b>DB2009</b>	No reform.

*Note:* For information on reforms in earlier years (back to DB2005), see the *Doing Business* reports for these years, available at <http://www.doingbusiness.org>.

## DATA NOTES

The indicators presented and analyzed in *Doing Business* measure business regulation and the protection of property rights—and their effect on businesses, especially small and medium-size domestic firms. First, the indicators document the complexity of regulation, such as the number of procedures to start a business or to register and transfer commercial property. Second, they gauge the time and cost of achieving a regulatory goal or complying with regulation, such as the time and cost to enforce a contract, go through bankruptcy or trade across borders. Third, they measure the extent of legal protections of property, for example, the protections of investors against looting by company directors or the range of assets that can be used as collateral according to secured transactions laws. Fourth, a set of indicators documents the tax burden on businesses. Finally, a set of data covers different aspects of employment regulation.

The data for all sets of indicators in *Doing Business 2012* are for June 2011.<sup>3</sup>

### Methodology

The *Doing Business* data are collected in a standardized way. To start, the *Doing Business* team, with academic advisers, designs a questionnaire. The questionnaire uses a simple business case to ensure comparability across economies and over time—with assumptions about the legal form of the business, its size, its location and the nature of its operations. Questionnaires are administered through more than 9,028 local experts, including lawyers, business consultants, accountants, freight forwarders, government officials and other professionals routinely administering or advising on legal and regulatory requirements. These experts have several rounds of interaction with the *Doing Business* team, involving conference calls, written correspondence and visits by the team. For *Doing Business 2012* team members visited 40 economies to verify data and recruit respondents. The data from questionnaires are subjected to numerous rounds of verification, leading to revisions or expansions of the information collected.

<sup>3</sup> The data for paying taxes refer to January – December 2010.

## ECONOMY CHARACTERISTICS

### Gross national income (GNI) per capita

*Doing Business 2012* reports 2010 income per capita as published in the World Bank's *World Development Indicators 2011*. Income is calculated using the Atlas method (current US\$). For cost indicators expressed as a percentage of income per capita, 2010 GNI in U.S. dollars is used as the denominator. Data were not available from the World Bank for Afghanistan; Australia; The Bahamas; Bahrain; Brunei Darussalam; Canada; Cyprus; Djibouti; the Islamic Republic of Iran; Kuwait; New Zealand; Oman; Puerto Rico (territory of the United States); Qatar; Saudi Arabia; Suriname; Taiwan, China; the United Arab Emirates; West Bank and Gaza; and the Republic of Yemen. In these cases GDP or GNP per capita data and growth rates from the International Monetary Fund's World Economic Outlook database and the Economist Intelligence Unit were used.

### Region and income group

*Doing Business* uses the World Bank regional and income group classifications, available at <http://www.worldbank.org/data/countryclass>. The World Bank does not assign regional classifications to high-income economies. For the purpose of the *Doing Business* report, high-income OECD economies are assigned the "regional" classification *OECD high income*. Figures and tables presenting regional averages include economies from all income groups (low, lower middle, upper middle and high income).

### Population

*Doing Business 2012* reports midyear 2010 population statistics as published in *World Development Indicators 2011*.

The *Doing Business* methodology offers several advantages. It is transparent, using factual information about what laws and regulations say and allowing multiple interactions with local respondents to clarify potential misinterpretations of questions. Having representative samples of respondents is not an issue;

*Doing Business* is not a statistical survey, and the texts of the relevant laws and regulations are collected and answers checked for accuracy. The methodology is inexpensive and easily replicable, so data can be collected in a large sample of economies. Because standard assumptions are used in the data collection, comparisons and benchmarks are valid across economies. Finally, the data not only highlight the extent of specific regulatory obstacles to business but also identify their source and point to what might be reformed.

Information on the methodology for each *Doing Business* topic can be found on the *Doing Business* website at <http://www.doingbusiness.org/methodology/>.

## Limits to what is measured

The *Doing Business* methodology has 5 limitations that should be considered when interpreting the data. First, the collected data refer to businesses in the economy's largest business city and may not be representative of regulation in other parts of the economy. To address this limitation, subnational *Doing Business* indicators were created (see the section on subnational *Doing Business* indicators). Second, the data often focus on a specific business form—generally a limited liability company (or its legal equivalent) of a specified size—and may not be representative of the regulation on other businesses, for example, sole proprietorships. Third, transactions described in a standardized case scenario refer to a specific set of issues and may not represent the full set of issues a business encounters. Fourth, the measures of time involve an element of judgment by the expert respondents. When sources indicate different estimates, the time indicators reported in *Doing Business* represent the median values of several responses given under the assumptions of the standardized case.

Finally, the methodology assumes that a business has full information on what is required and does not waste time when completing procedures. In practice, completing a procedure may take longer if the business lacks information or is unable to follow up promptly. Alternatively, the business may choose to disregard some burdensome procedures. For both reasons the time delays reported in *Doing Business 2012* would differ from the recollection of

entrepreneurs reported in the World Bank Enterprise Surveys or other perception surveys.

## Subnational *Doing Business* indicators

This year *Doing Business* published a subnational study for the Philippines and a regional report for Southeast Europe covering 7 economies (Albania, Bosnia and Herzegovina, Kosovo, the former Yugoslav Republic of Macedonia, Moldova, Montenegro and Serbia) and 22 cities. It also published a city profile for Juba, in the Republic of South Sudan.

The subnational studies point to differences in business regulation and its implementation—as well as in the pace of regulatory reform—across cities in the same economy. For several economies subnational studies are now periodically updated to measure change over time or to expand geographic coverage to additional cities. This year that is the case for the subnational studies in the Philippines; the regional report in Southeast Europe; the ongoing studies in Italy, Kenya and the United Arab Emirates; and the projects implemented jointly with local think tanks in Indonesia, Mexico and the Russian Federation.

Besides the subnational *Doing Business* indicators, *Doing Business* conducted a pilot study this year on the second largest city in 3 large economies to assess within-country variations. The study collected data for Rio de Janeiro in addition to São Paulo in Brazil, for Beijing in addition to Shanghai in China and for St. Petersburg in addition to Moscow in Russia.

## Changes in what is measured

The methodology for 3 of the *Doing Business* topics was updated this year—getting credit, dealing with construction permits and paying taxes.

First, for getting credit, the scoring of one of the 10 components of the strength of legal rights index was amended to recognize additional protections of secured creditors and borrowers. Previously the highest score of 1 was assigned if secured creditors were not subject to an automatic stay or moratorium on enforcement procedures when a debtor entered a court-supervised reorganization procedure. Now the highest score of 1 is also assigned if the law provides secured creditors with grounds for relief from an

automatic stay or moratorium (for example, if the movable property is in danger) or sets a time limit for the automatic stay.

Second, because the ease of doing business index now includes the getting electricity indicators, procedures, time and cost related to obtaining an electricity connection were removed from the dealing with construction permits indicators.

Third, a threshold has been introduced for the total tax rate for the purpose of calculating the ranking on the ease of paying taxes. All economies with a total tax rate below the threshold (which will be calculated and adjusted on a yearly basis) will now receive the same ranking on the total tax rate indicator. The threshold is not based on any underlying theory. Instead, it is meant to emphasize the purpose of the indicator: to highlight economies where the tax burden on business is high relative to the tax burden in other economies. Giving the same ranking to all economies whose total tax rate is below the threshold avoids awarding economies in the scoring for having an unusually low total tax rate, often for reasons unrelated to government policies toward enterprises. For example, economies that are very small or that are rich in natural resources do not need to levy broad-based taxes.

## Data challenges and revisions

Most laws and regulations underlying the *Doing Business* data are available on the *Doing Business* website at <http://www.doingbusiness.org>. All the sample questionnaires and the details underlying the indicators are also published on the website. Questions on the methodology and challenges to data can be submitted through the website's "Ask a Question" function at <http://www.doingbusiness.org>.

## Ease of doing business and distance to frontier

This year's report presents results for 2 aggregate measures: the aggregate ranking on the ease of doing business and a new measure, the "distance to frontier." While the ease of doing business ranking compares economies with one another at a point in time, the distance to frontier measure shows how much the

regulatory environment for local entrepreneurs in each economy has changed over time.

### Ease of doing business

The ease of doing business index ranks economies from 1 to 183. For each economy the ranking is calculated as the simple average of the percentile rankings on each of the 10 topics included in the index in *Doing Business 2012*: starting a business, dealing with construction permits, registering property, getting credit, protecting investors, paying taxes, trading across borders, enforcing contracts, resolving insolvency and, new this year, getting electricity. The employing workers indicators are not included in this year's aggregate ease of doing business ranking. In addition to this year's ranking, *Doing Business* presents a comparable ranking for the previous year, adjusted for any changes in methodology as well as additions of economies or topics.<sup>4</sup>

### Construction of the ease of doing business index

Here is one example of how the ease of doing business index is constructed. In the Republic of Korea it takes 5 procedures, 7 days and 14.6% of annual income per capita in fees to open a business. There is no minimum capital required. On these 4 indicators Korea ranks in the 18<sup>th</sup>, 14<sup>th</sup>, 53<sup>rd</sup> and 0 percentiles. So on average Korea ranks in the 21<sup>st</sup> percentile on the ease of starting a business. It ranks in the 12<sup>th</sup> percentile on getting credit, 25<sup>th</sup> percentile on paying taxes, 8<sup>th</sup> percentile on enforcing contracts, 7<sup>th</sup> percentile on resolving insolvency and so on. Higher rankings indicate simpler regulation and stronger protection of property rights. The simple average of Korea's percentile rankings on all topics is 21<sup>st</sup>. When all economies are ordered by their average percentile rankings, Korea stands at 8 in the aggregate ranking on the ease of doing business.

More complex aggregation methods—such as principal components and unobserved components—

<sup>4</sup> In case of revisions to the methodology or corrections to the underlying data, the data are back-calculated to provide a comparable time series since the year the relevant economy or topic was first included in the data set. The time series is available on the *Doing Business* website (<http://www.doingbusiness.org>). The *Doing Business* report publishes yearly rankings for the year of publication as well as the previous year to shed light on year-to-year developments. Six topics and more than 50 economies have been added since the inception of the project. Earlier rankings on the ease of doing business are therefore not comparable.

yield a ranking nearly identical to the simple average used by *Doing Business*.<sup>5</sup> Thus, *Doing Business* uses the simplest method: weighting all topics equally and, within each topic, giving equal weight to each of the topic components.<sup>6</sup>

If an economy has no laws or regulations covering a specific area—for example, insolvency—it receives a “no practice” mark. Similarly, an economy receives a “no practice” or “not possible” mark if regulation exists but is never used in practice or if a competing regulation prohibits such practice. Either way, a “no practice” mark puts the economy at the bottom of the ranking on the relevant indicator.

The ease of doing business index is limited in scope. It does not account for an economy’s proximity to large markets, the quality of its infrastructure services (other than services related to trading across borders and getting electricity), the strength of its financial system, the security of property from theft and looting, its macroeconomic conditions or the strength of underlying institutions.

#### *Variability of economies’ rankings across topics*

Each indicator set measures a different aspect of the business regulatory environment. The rankings of an economy can vary, sometimes significantly, across indicator sets. The average correlation coefficient between the 10 indicator sets included in the aggregate ranking is 0.36, and the coefficients between any 2 sets of indicators range from 0.17 (between protecting investors and getting electricity) to 0.57 (between starting a business and protecting investors). These correlations suggest that economies rarely score universally well or universally badly on the indicators.

<sup>5</sup> See Simeon Djankov, Darshini Manraj, Caralee McLiesh and Rita Ramalho, “*Doing Business* Indicators: Why Aggregate, and How to Do It” (World Bank, Washington, DC, 2005). Principal components and unobserved components methods yield a ranking nearly identical to that from the simple average method because both these methods assign roughly equal weights to the topics, since the pairwise correlations among indicators do not differ much. An alternative to the simple average method is to give different weights to the topics, depending on which are considered of more or less importance in the context of a specific economy.

<sup>6</sup> A technical note on the different aggregation and weighting methods is available on the *Doing Business* website (<http://www.doingbusiness.org>).

Consider the example of Canada. It stands at 12 in the aggregate ranking on the ease of doing business. Its ranking is 3 on both starting a business and resolving insolvency, and 5 on protecting investors. But its ranking is only 59 on enforcing contracts, 42 on trading across borders and 156 on getting electricity.

Variation in performance across the indicator sets is not at all unusual. It reflects differences in the degree of priority that government authorities give to particular areas of business regulation reform and the ability of different government agencies to deliver tangible results in their area of responsibility.

#### *Economies that improved the most across 3 or more Doing Business topics in 2010/11*

*Doing Business 2012* uses a simple method to calculate which economies improved the most in the ease of doing business. First, it selects the economies that in 2010/11 implemented regulatory reforms making it easier to do business in 3 or more of the 10 topics included in this year’s ease of doing business ranking.<sup>7</sup> Thirty economies meet this criterion: Armenia, Burkina Faso, Burundi, Cape Verde, the Central African Republic, Chile, Colombia, the Democratic Republic of Congo, Côte d’Ivoire, The Gambia, Georgia, Korea, Latvia, Liberia, FYR Macedonia, Mexico, Moldova, Montenegro, Morocco, Nicaragua, Oman, Peru, Russia, São Tomé and Príncipe, Senegal, Sierra Leone, Slovenia, the Solomon Islands, South Africa and Ukraine. Second, *Doing Business* ranks these economies on the increase in their ranking on the ease of doing business from the previous year using comparable rankings.

Selecting the economies that implemented regulatory reforms in at least 3 topics and improved the most in the aggregate ranking is intended to highlight economies with ongoing, broad-based reform programs.

#### *Distance to frontier measure*

This year’s report introduces a new measure to illustrate how the regulatory environment for local businesses in each economy has changed over time. The distance to frontier measure illustrates the distance of an economy to the “frontier” and shows

<sup>7</sup> *Doing Business* reforms making it more difficult to do business are subtracted from the total number of those making it easier to do business.

the extent to which the economy has closed this gap over time. The frontier is a score derived from the most efficient practice or highest score achieved on each of the component indicators in 9 *Doing Business* indicator sets (excluding the employing workers and getting electricity indicators) by any economy since 2005. In starting a business, for example, New Zealand has achieved the highest performance on the time (1 day), Canada and New Zealand on the number of procedures required (1), Denmark and Slovenia on the cost (0% of income per capita) and Australia on the paid-in minimum capital requirement (0% of income per capita).

Calculating the distance to frontier for each economy involves 2 main steps. First, individual indicator scores are normalized to a common unit. To do so, each of the 32 component indicators  $y$  is rescaled to  $(y - \min)/(\max - \min)$ , with the minimum value ( $\min$ ) representing the frontier—the highest performance on that indicator across all economies since 2005. Second, for each economy the scores obtained for individual indicators are aggregated through simple averaging into one distance to frontier score. An economy's distance to the frontier is indicated on a scale from 0 to 100, where 0 represents the frontier and 100 the lowest performance.

The difference between an economy's distance to frontier score in 2005 and its score in 2011 illustrates the extent to which the economy has closed the gap to the frontier over time.

The maximum ( $\max$ ) and minimum ( $\min$ ) observed values are computed for the 174 economies included in the *Doing Business* sample since 2005 and for all years (from 2005 to 2011). The year 2005 was chosen as the baseline for the economy sample because it was the first year in which data were available for the majority of economies (a total of 174) and for all 9 indicator sets included in the measure. To mitigate the effects of extreme outliers in the distributions of the rescaled data (very few economies need 694 days to complete the procedures to start a business, but many need 9 days), the maximum ( $\max$ ) is defined as the 95<sup>th</sup> percentile of the pooled data for all economies and all years for each indicator.

Take Colombia, which has a score of 0.21 on the distance to frontier measure for 2011. This score indicates that the economy is 21 percentage points away from the frontier constructed from the best performances across all economies and all years. Colombia was further from the frontier in 2005, with a score of 0.43. The difference between the scores shows an improvement over time.
