The figure below depicts in graphic form the results of benchmarking Pakistan on selected metrics grouped into four sets of color-coded pillars that represent the Resilience, Inclusion, Sustainability and Efficiency of growth, respectively. Along each pillar, scores indicate Pakistan’s percentile ranking among 167 countries. Scores range from 0 to 100, with higher scores indicating better performance. The scores along each pillar are, in turn, based on an equal-weighted average of a group of sub-indicators that broadly represent that pillar. Pakistan ranks below the median in each of the four pillars. The country ranks 38th, 22nd, 26th, and 31st below the global median on the resilience, inclusion, sustainability, and efficiency dimensions, respectively.
